

Program Specifications

Community and Family Support (CAFS) Program

September 2025

Our commitment to Aboriginal people, the traditional owners and custodians of Country

We acknowledge the Stolen Generations, including Aboriginal children, young people and families currently affected by the statutory child protection system.

We acknowledge the needless suffering and trauma inflicted on Aboriginal children, young people and families through colonisation and forced assimilation.

We acknowledge that this trauma continues to affect Aboriginal people today and that Aboriginal children and families continue to be disproportionately affected by the statutory child protection system. We undertake to shape our practices accordingly using the expertise and knowledge of Aboriginal families, communities and Elders.

All Community and Family Support (CAFS) program service providers funded by the NSW Department of Communities and Justice must be committed to delivering culturally safe and responsive services for Aboriginal children, young people and families, driven by the principle of Aboriginal self-determination, and working with families and communities to keep families safely together and strong.

Note on terminology

The term 'Aboriginal' in the Program Specifications refers to both Aboriginal and Torres Strait Islander peoples. It is used to refer to the numerous nations, language groups and clans in NSW. The CAFS program supports children, young people and families from diverse Aboriginal and Torres Strait Islander communities and backgrounds across NSW.¹

The term 'family' captures all different types of family and kinship groups. We acknowledge that family compositions are unique and encompass many cultural factors such as Aboriginal kinship structures.

The term 'family violence' refers to domestic and family violence. The CAFS Program Specifications use the terminology 'family violence' as this is the preferred term for domestic and family violence within Aboriginal and Torres Strait Islander communities, given it captures the extended definition of family.²

The term 'parent' refers to a child's primary carer and can include a biological parent, carer, caregiver or guardian, as well as the broader kinship roles that Aboriginal families carry out in caring for children.

1 Purpose

1.1 Purpose of the CAFS Program Specifications

The Community and Family Support (CAFS) program brings together two NSW Department of Communities and Justice (DCJ) early intervention programs:

- Targeted Earlier Intervention (TEI) – formerly made up of the Community Strengthening and Wellbeing and Safety streams; and
- Family Connect and Support (FCS).

The CAFS Program Specifications (the Program Specifications) set out the intended program outcomes and target groups, and the expected services to be delivered under the CAFS program, in the context of the DCJ contracting system and the NSW Human Services Outcomes Framework.

Clause 5 of the **Standard Terms** of the Agreement for Funding of Services contains further information about service providers' obligation to comply with the Program Specifications.

These Program Specifications may be amended or replaced from time to time by DCJ. Service providers should comply with the current version of the Program Specifications. Updates to the Program Specifications will be shared with service providers.

The content of these Program Specifications applies to CAFS service providers across all program activities, unless otherwise stated. Any requirements that are unique to an individual program activity are detailed in [section 3.3](#).

Note: the Program Specifications present the scope of service delivery in the CAFS program. Individual service providers are not expected to offer every program activity or service type contained within these Program Specifications, but should be able to recognise their service within the overall program description. Individual service provider contracts will outline the program activity and service types each service provider should be delivering.

1.2 Program overview

Evidence shows that early intervention is the most effective strategy to improve outcomes for children, young people, families and communities.³ The CAFS program offers voluntary support to children, young people, families and communities where the evidence suggests it will have the most impact, early in life and early in need.

The CAFS program delivers culturally safe, responsive and flexible support services to meet the needs of children, young people, families and communities. These needs may change over time or emerge due to broader social issues, such as pandemics, natural disasters and global crises that impact the cost of living. The program recognises that the needs of families and communities are not static and that people move in and out of hardship and disadvantage and will need different levels and types of support over time.

CAFS services promote family and community wellbeing and reduce vulnerability and risk factors (including those that may lead to child abuse, neglect and family violence), while also building protective factors and supporting healthy childhood development. The program helps to foster and grow personal, family and community-level strengths and capabilities, and to increase individual and community safety.

The program supports wellbeing outcomes by helping the growth of social connection and strong relationships. It recognises safe, secure relationships are a critical protective factor in the prevention of, and recovery from, adverse childhood experiences and trauma.⁴

The CAFS service system is designed in collaboration with local service providers, communities and local governance arrangements, which involve a broad range of stakeholders.

CAFS services do not operate in isolation but sit within a complex and diverse human service system, encompassing a broad range of early intervention supports delivered by non-government organisations, NSW Government, Australian Government, local councils and philanthropy. The willingness of service providers to collaborate, co-design and coordinate with other services, both government and non-government, universal and targeted, is vital for the CAFS program to achieve outcomes for its target groups.⁵

³ Fox, S., Southwell, A., Stafford, N., Goodhue, R., Jackson, D. and Smith, C. (2015). *Better systems, better chances: a review of research and practice for prevention and early intervention*. (2018). *Realising the potential of early intervention*. <https://www.eif.org.uk/report/realising-the-potential-of-early-intervention>

⁴ James Martin Institute of Public Policy. (2024). *Supporting children and families to flourish*. <https://www.centreforrelationalcare.org.au/jmi-report>

⁵ Examples of universal and targeted services include health, education and housing supports and services.

1.3 Program structure

The CAFS program is made up of three program activities:

1. **Community Strengthening** focuses on community wellbeing, the collective sense of belonging, participation, trust, and access to resources and services that allow individuals and their communities to flourish and fulfil their potential. This is particularly important for at risk groups within the community. This includes services that build and facilitate community cohesion, inclusion and wellbeing, and empower Aboriginal communities – for example, delivering community events and workshops, advocacy and support, and education and skills training.
2. **Family Connect and Support** provides a soft entry point and connection to the service system for families who require services to prevent their needs escalating. FCS helps families identify their strengths and address underlying issues and needs by delivering holistic assessment, case coordination, warm referrals, information, advice and practical support.
3. **Wellbeing and Safety** aims to support children, young people and families with targeted and intensive support. This includes services that strengthen protective factors and respond to risk factors that may lead to child abuse, neglect and/or family violence, and help parents and caregivers provide their children and young people with a safe and nurturing home – for example, counselling, family capacity building, parenting programs and supported playgroups.

Service providers may deliver services across any or all the program activities. Service providers are contracted to deliver particular service types, depending on the outcome of local commissioning processes which determine local priorities (see [section 3.2](#)) for service provision.

**Children, young people, families and communities in NSW
receive the support they need, when they need it**

Figure 1: Community and Family Support program structure

2 Legislative and policy context

The NSW Agreement for Funding of Services, which includes the **Standard Terms and Schedule for Community and Family Support**, outlines service provider obligations, including the requirement that services be provided in accordance with all applicable laws, standards and policies and accreditation requirements.

All service providers must comply with all relevant provisions in the *Public Finance and Audit Act 1983* and the *Privacy and Personal Information Protection Act 1998*.

Clause 6 of the **Agreement for Funding of Services – Standard Terms** also requires service providers to ensure that all personnel engaged in providing services are properly authorised, accredited, trained and experienced and have completed all mandatory pre-employment screening, including a Working with Children Check (WWCC).

The primary legislation that underpins DCJ provision of funding to non-government organisations under the CAFS program is the *Community Welfare Act 1987* and associated regulations, which seek to protect and improve the wellbeing of the people of NSW.

The *Children and Young Persons (Care and Protection) Act 1998* (Care Act) also impacts on the delivery of DCJ funded programs. The Care Act broadly aims to ensure that children and young people receive the care and protection necessary for their safety and wellbeing and covers mandatory reporting requirements (section 27) and information exchange (Chapter 16A).

2.1 Chapter 16A and information sharing

Chapter 16A of the Care Act allows prescribed government and non-government bodies the authority to share relevant information about children and young people to collaboratively promote their safety, welfare and wellbeing. Staff in CAFS services should use the provisions of Chapter 16A to gather comprehensive and relevant information from the referring agency and other professionals involved with the family to make a holistic assessment of family need and to inform case planning.

The [DCJ website](#) has further guidance.

2.2 Child Safe Standards

The Child Safe Standards (the Standards) are principle-based and designed to keep children safe by creating organisations that help prevent, detect and respond more effectively to harm and abuse, if it occurs. The Standards are included in section 8C of the *Children's Guardian Act 2019*.

Some CAFS service providers will already have a regulatory obligation to implement the Standards as part of the Child Safe Scheme regulated by the Office of the Children's Guardian (OCG), depending on the services they provide and the sector in which they provide services. For service providers who don't fall under the Scheme, DCJ expects you to apply the Standards as a form of best practice to support the safety of children and assist your organisation to better prevent and respond to child abuse.

The Standards are explained in more detail on the [OCG website](#). This site contains [resources](#) (including a self-assessment tool) to support service providers to understand the Standards and identify ways to improve their child safe practices.

2.3 Policy context

The CAFS program contributes to several state and national initiatives by investing in services which respond to the needs of children, young people, families and communities. This includes a strong commitment to improving outcomes for Aboriginal people. Some of these initiatives are:

NSW Human Services Outcomes Framework – a cross-agency framework which specifies seven wellbeing outcomes for the NSW population: Safety, Home, Economic, Health, Education and Skills, Social and Community, and Empowerment. The NSW Human Services Outcomes Framework is applied to ensure a focus on driving improvement in outcomes that matter for clients and communities. The CAFS Program Client Outcomes Framework directly aligns to the domains of the NSW Human Services Outcomes Framework.

Brighter Beginnings NSW – a whole of government initiative to give all children in NSW the best start. It has a focus on human services initiatives supporting children from pregnancy to the start of school, with a particular emphasis on the first 2000 days. The CAFS program aligns to the objectives and vision of Brighter Beginnings, to increase universal access to education, health, community and government services and to provide targeted early interventions and support to families experiencing vulnerability and hardship.

Family is Culture (FIC) Independent Review – DCJ is committed to responding to the FIC recommendations and building a child protection system that is more responsive to the needs of Aboriginal children, families and communities. Delivering the CAFS program aligns to recommendations 21, 22, 24 and 38. These recommendations have a focus on increasing investment in early intervention support with a preference for delivery of early intervention and prevention services by Aboriginal Community Controlled Organisations (ACCOs) and working in partnership with Aboriginal stakeholders and community members to evaluate existing early intervention and prevention focused programs and their effectiveness for Aboriginal people and communities. There is also a focus in the FIC review of DCJ working closely with relevant agencies and service providers across the human services sector, including ACCOs to coordinate integrated service provision in early intervention support efforts for Aboriginal families and children.

Safe and Supported: the National Framework for Protecting Australia's Children 2021–2031 and First Action Plan (2023-2026) – Australia's framework to reduce child abuse and neglect and its intergenerational impacts. A key focus area of Safe and Supported is a 'National approach to early intervention and targeted support for children and families experiencing vulnerability or disadvantage'. The guiding principles of the National Framework align to CAFS's service practice principles, including cultural safety, universal access to quality services, evidence-informed and person-centred approaches. Delivering the CAFS program aligns directly to Action 1 of this plan with a focus on early supports to 'address the social determinants of child safety and wellbeing through early and targeted support and improved access to services for vulnerable children and families'.

The Aboriginal and Torres Strait Islander peoples' First Action Plan 2023–2026 – focuses on achieving safety and wellbeing for First Nations children and sets out how to reduce their overrepresentation in child protection systems. With a focus on increasing investment in ACCOs and supporting a connected human services sector, CAFS aligns to Actions 2, 3 and 8 of this Action Plan.

National Plan to End Violence Against Women and Children 2022–2032 – the overarching national policy framework that will guide actions towards ending violence against women and children in one generation. Directly linked to the CAFS program, one of the four domains identified is 'Early intervention – identifying and supporting individuals who are at high risk of experiencing or perpetrating violence and prevent it from reoccurring' is a key focus of the plan.

NSW Domestic and Family Violence Plan 2022–2027 and NSW Sexual Violence Plan 2022–2027 – provide the NSW Government with strategic direction to prevent and respond to domestic, family and sexual violence from 2022–2027 and work towards a shared policy framework and vision that all people and communities in NSW are free from domestic, family and sexual violence. Pillar two of these plans is 'Early Intervention' including targeted responses that aim to identify risks to safety and ensure timely responses are delivered before risks escalate to violence or to more severe violence including sexual violence.

Independent Review of the National Disability Insurance Scheme (NDIS) - identified a need for improved inclusion and accessibility of mainstream services, improvements to the way the NDIS works for everyone involved and a need for additional supports. The NDIS Review recommended there should be a connected system of supports that includes mainstream services such as the availability of Foundational Supports for children and families.

2.4 Investment in Aboriginal early support services

To reflect the commitment to improve outcomes for Aboriginal children, families and communities, the CAFS program aligns to several state and national priority reforms and initiatives listed above. These call for further investment in early intervention services to build the ACCO sector and reduce the over-representation of Aboriginal children in out-of-home care.

Objectives of the CAFS program include:

- sharing and recording data that is meaningful to Aboriginal communities
- increasing CAFS program funding with ACCOs
- sharing decision-making authority with Aboriginal communities and ACCOs through service co-design, and exploring opportunities for Aboriginal-led commissioning
- putting Aboriginal Case Management Policy (ACMP) principles into practice.

3 Program description

3.1 Program objectives

The objectives of the CAFS program align with the CAFS vision for all children, young people, families and communities in NSW to receive the support they need, when they need it.

The program objectives are:

- Aboriginal children, young people, families and communities have access to Aboriginal designed or co-designed, and Aboriginal delivered, supports and services.
- CAFS services are culturally safe and responsive, trauma informed and healing focused.
- CAFS services harness the unique strengths and resources of individuals, families and communities. Services walk alongside families and recognise individuals and families as agents of change.
- CAFS services foster the growth of community connection, capacity and wellbeing through local place-based services.
- Risk factors that lead to child abuse, neglect and family violence are identified and addressed early.
- Families can access CAFS services to meet the needs of children and young people early to prevent escalation and improve outcomes.
- CAFS services address emerging needs and provide support for children and their families during critical periods of development.

The CAFS program can achieve this through the commissioning of services that:

- Empower Aboriginal families to lead assessments and decision-making and keep their children safe at home and connected to kin, community, Country and culture.
- Actively facilitate shared decision-making authority and choice about services and supports for Aboriginal people and communities.
- Recognise the significant role of culture as a protective factor for children and young people in their family and broader communities.
- Help communities to support and protect their members through building strong social connections and support networks.
- Support parents and caregivers to meet the physical and material needs of their children.
- Support parents and caregivers to meet the social, emotional and developmental needs of their children by developing positive parenting skills, building confidence and addressing causes of negative parenting practices.
- Assist young people to stay connected with their family and make positive life choices as they move into adulthood.
- Actively engage with children, families and communities in need by breaking down barriers to accessing support and working with them to coordinate services.
- Collaborate and network with other child, family and community early support services and more intense, multidisciplinary services.

- Actively partner with other services, including health and education, to provide integrated services and where possible wraparound and place-based models of service delivery to ensure children, families and communities receive the range of support they need.

3.1.1 CAFS service practice principles

To deliver an effective CAFS service system, the following practice principles should be used in the delivery of services with CAFS clients. CAFS services should be:

- **Culturally safe, responsive and respectful.** Recognising the past and present life experiences of individuals, families and communities. Promoting connection to cultural knowledge, values, traditions and strengths.
- **Trauma aware and informed.** Culturally affirming and healing focused. Recognising the impact of trauma (including intergenerational trauma), family violence and the ongoing experiences of racism and stigma on people accessing services.
- **Flexible and responsive.** Using diverse engagement methods to reach different client groups. Recognising and responding to changes in community and society and providing different levels and types of support to clients depending on their needs.
- **Person and family centred.** With the child, young person and/or family at the centre and leading decision-making, and with holistic assessments of strengths and needs.
- **Strengths based.** Using strengths-based and community-led approaches to design and implement services. Supporting people to build their capacity for change and communities to leverage from their strengths and resources.
- **Evidence informed.** Using evidence to design, implement and improve programs and services across the life course, using natural development phases and transition points as opportunities to deliver services.
- **Holistic and collaborative.** Taking a holistic view of the family and all children and young people in the family unit. Working in partnership with other services and/or organisations to build an integrated service system and improve client outcomes.
- **Capability building.** Supporting families to develop their capabilities and take charge of their own lives. Building cohesion, resources and social capital within communities.
- **Localised and community centred.** Designed in collaboration with communities to meet local needs. Delivered by local services, or services with a footprint in the local community.
- **Connected.** Ensuring clients and communities are supported to build and sustain kinship and informal networks and connections in the local community. Supporting connection to culture, community and Country.
- **Integrated into everyday settings.** delivering services in everyday settings families already access and where children routinely learn and develop, such as at home, in the community, and in universal service settings.

These principles have been informed by a range of sources, including the Aboriginal-led Early Support Programs Evidence Review.

3.2 Target groups and local priorities

The target population for the CAFS program is children, young people, families and communities within NSW who are in need. This population may experience challenges and/or barriers to identifying and accessing the services they need to live independent and self-determining lives.

3.2.1 Key target groups

A number of key groups are recognised as particularly important in the context of early support planning and are recognised across all three program activities:

Aboriginal children, young people, families and communities. DCJ has a strategic commitment to improve the outcomes of Aboriginal families and communities, and to ensure that all Aboriginal people in NSW have self-determination about matters that affect their lives.

0–5 year olds. This aligns with NSW Health's 'First 2000 Days Framework', reflecting the lifelong impact of adverse experiences during this period, as well as the opportunities to build resilience, mitigate against risk and influence positive life course outcomes during this period.

Children and young people at risk of disengagement from school, family and community. Family and community connections can be central to the development of positive self-identity. A child or young person's experiences and support during transition periods can have a significant impact on school engagement, school completion and later employment.

Young parents with known vulnerabilities or who are experiencing a number of hardships. Young parents can benefit from parenting support, practical assistance, advocacy and other services to help build a nurturing and stimulating home environment for their child and connect with the services they need to support themselves and their family.

Children and young people affected by mental health conditions. Children and young people affected by mental health conditions often have poor long-term outcomes. Children and young people can benefit from intervention support with earlier identification and timely and targeted referrals.

Children under 9 years of age with low level autism and/or developmental delay and low-to-moderate support needs. Research suggests the earlier the family, carers or kin of children with developmental support needs are involved in intervention programs and the more exposure they have to targeted interventions, the better the outcomes.

These key groups are not mutually exclusive. Some children, young people and their families may belong to more than one group.

This list of key target groups is not exhaustive of potential CAFS clients, and CAFS services may support other client groups according to local priorities and needs.

These key target groups align with priorities highlighted by the Stronger Communities Investment Unit – 2018 Insights Report and other key reports and inquiries.

3.2.2 Local priorities

CAFS services are commissioned in line with local priorities. Local planning processes determine priority groups and issues, taking into consideration the key target groups (above) and other available research, evidence and data.

The key target groups have been identified to guide rather than direct local investment. Local priorities may not align directly with the key groups identified above and may include additional groups, depending on local evidence, need and circumstances. For example, in a community with a high population of culturally and linguistically diverse (CALD) families, local planning may identify CALD families with children aged 0–5 years as a priority.

3.3 Program activities

Across all CAFS program activities, there is a focus on improving the safety and wellbeing of children, young people, families and communities.

Within each program activity, there are a diverse range of service types offered to meet the needs of individuals and communities. People may access multiple service types across program activities at the same time. Levels of need may change over time and therefore their need for service types may change.

The program does not have time restrictions for service provision (with the exception of Family Connect and Support) to ensure there is flexibility in service delivery in response to client needs.

3.3.1 Program logics in all program activities

Program logics have been developed for CAFS program activities that connect the current situation with the evidence, services and client outcomes the program aims to achieve. Service providers must develop their own program logic, using the program-level program logics ([Appendix A](#)), which will help demonstrate how the outcomes each service provider is achieving contribute to the overarching client outcomes for the program.

Service providers may need to complete more than one program logic, depending on what program activity they are funded to deliver and who they are delivering services to. This is explained in the sections below for each program activity.

Service providers must review their program logic at least annually and/or when there is a contract variation, or when service delivery changes.

Resources are available on the DCJ website to support service providers in developing program logics. This includes individual program logic templates with examples and an [e-learning module](#) to support service providers in developing their program logics.

Note: The Cultural Safety and Wellbeing Program Logic ([Appendix A](#)) is only applicable to non-ACCOs. CAFS service providers are **not** required to develop their own separate cultural safety and wellbeing program logic. Non-ACCOs must use the principles of the Cultural Safety and Wellbeing Program Logic in their service design and delivery.

See [section 3.3](#) for further information about program logics for each program activity.

Program activity 1: Community Strengthening

Strong community wellbeing is critical for helping children, young people and families thrive, especially when they are in need. Community wellbeing is a collective sense of belonging, participation and trust, as well as access to resources and services that allow individuals (including children and young people) and their communities, to grow, flourish and fulfil their potential.

Evidence finds that a child or young person's social and community environment, including school, community services and neighbourhood quality, can influence the development of their resilience, and that community-level protective factors may also be important in extending the reach of specialist support services to help children and young people.⁶

The Community Strengthening program activity builds social and community connections and enhances inclusion and cohesion by connecting members of a community in need with their broader network and supporting the community as a whole.

Community Strengthening activities are an important part of an integrated system and the provision of multi-level approaches. These approaches provide holistic, preventative and protective support, while helping address social determinants of poor wellbeing.⁷

Through preventative and early intervention activities, Community Strengthening supports the growth of strong, healthy, protective communities; the optimal environments for children and young people to grow and thrive.

The Community Strengthening program activity is not restricted by program eligibility criteria. Rather, it is designed to be delivered flexibly in response to community and client needs.

Community Strengthening services often provide a soft entry to other supports and services.

Community Strengthening services are culturally safe, responsive and relevant, and support healing for Aboriginal people and communities. Community Strengthening initiatives are strengths based and developed in authentic partnership with the community.

Neighbourhood and Community Centres

Community Strengthening includes Neighbourhood and Community Centres that provide and sustain social infrastructure. Using community development approaches, Community Strengthening services create opportunities for communities to identify their needs, priorities and aspirations, and support them to enact solutions to local issues.

Neighbourhood and Community Centres also provide safe and accessible spaces for all members of the community, especially members who are marginalised or require assistance. These centres provide tangible support and assistance and contribute to improvements in community wellbeing, public health, social connection, disaster preparedness and resilience.⁸

DCJ is committed to working together with Community Strengthening organisations to meet community needs and develop solutions that prioritise connectedness, self-determination and belonging. This commitment is reflected in the Shared Commitment to Collaboration for Neighbourhood and Community Centres in NSW.

⁶ Jean-Thorn, A., Tremblay-Perreault, A., Dubé, V., & Hébert, M. (2023). A systematic review of community-level protective factors in children exposed to maltreatment. *Trauma, Violence, & Abuse*, 24(4), 2827–2842. journals.sagepub.com/doi/10.1177/15248380221117234.

⁸ Neighbourhood and Community Centres in NSW: LCSA 2022 Census Summary Report, p. 2.

PROGRAM ACTIVITY Community Strengthening

Service types	
Advocacy and support	Indigenous advocacy / support
Community engagement	Indigenous community engagement
Community sector coordination	Indigenous healing activities
Education and skills training	Information / advice / referral
Facilitate employment pathways	Social participation

See [Appendix D](#) for more information on the CAFS service types.

Community Strengthening – evidence and program logics

Service providers under the Community Strengthening program activity are expected to use the evidence from the [Community Strengthening Evidence Review](#), including the [five critical elements](#), to build their individual program logics and design and deliver services.

This evidence is captured in the Community Strengthening Program Logic ([Appendix A](#)). The five critical elements are:

- **Inclusive and genuine co-design and partnership:** building authentic partnerships with community that work towards community ownership while also ensuring that the diverse voices of community are represented.
- **Leveraging strengths and building capacity:** initiatives that are both strengths based and actively build community capacity.
- **Creating safe and effective spaces:** spaces that are safe and accessible to everyone to allow for the effective engagement of diverse community members.
- **Intersectional and safe approaches:** incorporating an understanding of how the different aspects of a person's identity (e.g. gender, ethnicity, disability) can expose them to overlapping and intersecting forms of discrimination and marginalisation to allow for the delivery of a more integrated, safe and holistic suite of services.
- **A whole system approach:** interventions that are part of a whole system approach interconnect multiple community cohorts and agencies.

 Delivering Community Strengthening services to:	How do I develop my program logic?
Community	Service providers funded under the Community Strengthening program activity will develop an individual program logic using the Community Strengthening Program Logic .
Young people	Service providers funded under the Community Strengthening program activity, with a specific focus on delivering services to young people, will develop an individual program logic using the Community Strengthening Program Logic and findings from the Youth Work – Agency and Empowerment Evidence Review .

Community Strengthening – organisations delivering community sector coordination activities

The Community Strengthening program activity also includes community sector coordination activities to support service delivery. Organisations delivering the community sector coordination service type will work closely with CAFS services to help them develop their organisational capability and support coordination and collaboration within the sector.

These organisations should prioritise and promote the CAFS Service System Outcomes through their work with other CAFS service providers and must demonstrate how the services they deliver contribute to achieving these outcomes.

 Delivering Community Strengthening services to:	How do I develop my program logic?
CAFS service providers	Organisations funded under the Community Strengthening program activity and delivering the community sector coordination service type will develop an individual program logic using the Community Strengthening Program Logic and the Service System Outcomes (section 6).

Program activity 2: Family Connect and Support

Family Connect and Support (FCS) service providers work with children, young people and families in NSW to build family capacity and decrease risk. Core service features include information and advice, initial and comprehensive assessment, warm/outbound referrals, practical assistance, proactive outreach, short-term case planning and coordination, and active holding.

The role of the FCS service provider is to identify and build on formal and informal strengths and resources within a family and work in partnership with families to address any issues and concerns. This program activity aims to reduce the need for involvement of the statutory child protection system in the future.

Where required, FCS service providers should operate during core business hours and be available to provide a service to families outside core business hours when required. This can involve the flexible use of workers after hours when required in response to family needs and circumstances or providing a service outside business hours in line with agency after-hours processes. FCS providers may also deliver services via outreach, tele-practice and/or mobile services.

PROGRAM ACTIVITY Family Connect and Support

Service types

Active holding
Family capacity building
Information / advice / referral

See [Appendix D](#) for more information on the CAFS service types.

FCS service features

Service providers contracted to provide the FCS program activity must deliver the service features outlined below.

Suitability Criteria

FCS service providers are encouraged to have conversations with both the referrer and the family to determine overall suitability for FCS. FCS service providers should consider individual circumstances and exercise their professional judgement in each case.

FCS service providers can work with any family as FCS does not have exclusionary criteria.

In most cases, FCS is for families:

- with a child under 18 years of age, living in the long-term or permanent care of the family or household, and
- who are not currently and actively case managed by another service provider.⁹

⁹ Based on the information known to the FCS service provider at the time of referral. FCS service providers are encouraged to talk to families about any services they are already working with. FCS service providers should not request an open plan check from DCJ. In some circumstances, it may be appropriate to work with families case managed by another service provider to support their current unmet needs. If unsure, service providers are encouraged to talk to their contract managers.

DCJ referrals

Referrals may be made by DCJ, including directly from the Child Protection Helpline and from DCJ statutory child protection services, provided the referral meets the suitability criteria above.

If a referral is received from DCJ, the family has been the subject of a report, or a request for assistance from the Child Protection Helpline. The most recent Helpline report for that family, will have been assessed as requiring a less than 10-day response with no other supports or responses identified as appropriate and available.¹⁰

Where families are unsuitable for the FCS program activity, the FCS service provider will arrange an appropriate referral and provide information about alternative services to the family or referrer.

There is a 30% cap on DCJ referrals to FCS. The purpose of the cap is to ensure that FCS does not become overloaded with DCJ referrals, leaving limited capacity for community or self-referrals. FCS service providers and DCJ should work together to develop formal protocols to monitor and track local referrals, including establishing quotas for inbound referrals.

Negotiation of referral quotas with DCJ should involve both child protection services staff (Manager Client Services, Community Services Centre; Director Community Services) and DCJ Commissioning and Planning. Protocols should include dispute resolution processes.

FCS service providers and DCJ must agree that FCS is the most suitable option to provide support to the family at that point in time. Where there is disagreement, FCS and DCJ should follow established processes for the decision to be reviewed and escalated if required. All DCJ referrals to FCS service providers will be made using the Universal Referral Form (URF) on ChildStory.

Once the referral is received and a decision is made about whether it will be accepted, the FCS service provider will advise DCJ about the outcome.

Inbound referrals

FCS referrals can also be received from a range of other sources, including Child Wellbeing Units, mandatory reporters in universal settings (e.g. schools and hospitals) and the community or self-referrals.

Timeframes for service delivery¹¹

Once a referral is received by an FCS service provider, timeframes for engagement and service delivery start. FCS service providers should promptly acknowledge and advise the referrers if a referral has been accepted.

As FCS is time limited, service providers are encouraged to work with families to identify their needs and refer them to relevant supports in the shortest period.

As a guide, FCS should work with families for up to 16 weeks, although this will be driven by the family's needs. The maximum period of FCS service delivery is six months from the time the referral is received. When required, a family can be re-referred to FCS. There is no limit on the number of re-referrals to an FCS service provider.

¹⁰ As above.

¹¹ While the FCS program activity has timeframes around how long a provider can work with a client, the Community Strengthening and Wellbeing and Safety program activities have no time restrictions. Unless a timeframe is specifically agreed during contract negotiations, service providers can offer services under these two program activities for as long as deemed necessary.

Consent

While it is always better to obtain consent before making a referral, an FCS service provider can make initial contact with the family without consent to allow the service to engage with the client.

FCS service providers will seek informed consent directly from the family as soon as practical to undertake initial assessment and deliver FCS services. Ongoing engagement with the FCS service by the family is voluntary.

Client triage and assessment

FCS service providers undertake a triage assessment to help develop an understanding of who the family is and their presenting issues, needs and situation. FCS aims to make an initial assessment of their needs within one week of a referral being received. Following this, if required, service providers undertake a comprehensive, holistic, strengths-based child and family assessment with families to develop a deeper understanding of the family's strengths and current needs.

When a comprehensive assessment is required, the Common Assessment Tool (CAT) must be used to help to determine the child and/or family's strengths and needs, to then inform case coordination, planning and referrals. The Common Assessment Framework (CAF) can also be used to guide the assessment approach.

Where the inbound referrer has already undertaken an assessment, the FCS provider will seek permission to access the assessment to minimise duplicative client assessment, unless it is necessary to a client's current situation.

Client engagement

Clients referred to the FCS program activity will be contacted within three working days on receipt of a referral. It can take time to build trust and engage families, so a minimum of three contact attempts should be made with the family.

FCS service providers will use flexible approaches and outreach channels to reach clients, build trust and break down barriers. Client engagement is a key feature of the FCS program activity and aligns with the Preventing Child Maltreatment Evidence Review core component of 'engagement'.

The CAF and CAT include further guidance on client engagement.

Case coordination and planning

Where a clients' needs are assessed as more complex or a range of service responses is required, service providers will work with the family to develop a family case plan. Plans will be family led, strengths based and identify appropriate timeframes, resources and supports.

The CAF includes further guidance on case coordination and family case planning.

Warm/outbound referrals

Outbound client referrals will be appropriate, timely and facilitated ('warm') by the FCS practitioner. A warm referral means families are directly supported by FCS to contact a service or another professional. Where there is a family case plan, outbound referrals will align with the case plan goals.

Aboriginal and CALD children and families will be supported to access culturally safe and appropriate programs and services.

The CAF includes further guidance on making referrals.

Active holding

An active holding response will be used where an FCS service provider is unable to refer or arrange services to meet a families' needs due to gaps or lack of availability in the service system.

Active holding involves the FCS service provider monitoring the family's circumstances and providing short-term case management and support to address immediate needs, including

practical support and home visits, and follow-up with service providers while suitable services are being arranged.

The [CAF](#) and [FCS service types](#) include further guidance on active holding practice.

Case follow up and feedback

FCS service providers will follow up on the outcome of an outbound referral by contacting the referral agency and/or the family. FCS service providers will use their professional judgement to determine the most appropriate means to follow up and how best to obtain information about the outcome of a referral.

Case follow up will help ascertain if the referral appropriately met the family's need. A follow-up process may determine the need for the family to be reassessed or a different referral or service to be initiated.

Use of material aid / brokerage funding

Material aid / brokerage is a component of the family capacity building service type. It can be used for families where presenting issues can be quickly addressed through practical assistance and where services and support are not otherwise available.

FCS service providers will use material aid / brokerage funds to ensure:

- the timely and effective engagement of families, and
- the management of presenting issues through the purchase of services or goods that address the immediate needs of a child or young person at risk of entering the statutory child protection system, where these services or goods are not otherwise available.

Case transition and closure

FCS service providers work with families to ensure cases are closed and/or clients and families are transitioned appropriately to other services. Factors for consideration at transition include the achievement of case plan goals and the extent to which the family will benefit from a case being transferred or closed. A transfer to a different service will be completed only where both services and the family understand (and agree) on the benefit.

Families can exit the FCS service at any stage. Cases remain open and active until case plan goals are achieved or the case is transferred to an appropriate service provider and follow-up is completed.

If the family wishes to exit the program, but the FCS service provider considers there are current risks or concerns about a child or young person, the FCS service provider should complete the [Mandatory Reporter Guide](#).

Identifying and responding to family violence

FCS workers will be skilled in identifying and responding to family violence through trauma-informed and culturally safe service responses. Service provision aims to address the immediate needs of victim-survivors and their children and families. This includes understanding the nature and cycle of family violence and developing safety plans with victim-survivors and their families.

FCS workers will have sound knowledge of specialised family violence services and referral pathways within their local area and the capability to escalate high-risk cases through the appropriate means (i.e. police, Safety Action Meeting and ROSH reports).

Where possible and appropriate, FCS workers can also make referrals for perpetrators of violence to accredited behaviour change and other specialist programs.

FCS outreach in universal and community settings

Providing outreach services by physically locating an FCS service provider within universal settings is an effective model of delivering FCS and supports the early identification of children and young

people in need. It also builds capacity within other services, helping staff to identify and respond to need earlier.

FCS identifies soft entry points within universal and community settings and provides outreach in partnership with other services (e.g. early childhood education provider, early childhood nurse or home school liaison officer).

The partnerships formed with universal services help to build knowledge and understanding across the service system, which strengthens referral pathways and enhances outcomes for families.

Family Connect and Support: evidence and program logics

 PROGRAM ACTIVITY Family Connect and Support	
How do I develop my program logic?	Service providers funded under the Family Connect and Support program activity are not required to develop an individual program logic for their service.¹² See a program-wide program logic at Appendix A.

¹² The FCS program activity differs from the other program activities as it is a specific and unique program model implemented uniformly across NSW. As such, FCS service providers are not required to develop an individualised program logic and can instead use the program-wide program logic.

Program activity 3: Wellbeing and Safety

The Wellbeing and Safety program activity comprises services aimed at supporting children, young people and families with tailored support when they are in need.

Services focus on ensuring that individuals are supported to seek help and improve wellbeing, that parents are supported to develop positive parenting skills, increase their confidence and address underlying causes of negative parenting practices. This helps ensure families are supported to provide an environment for their children and young people that is safe, nurturing and fosters early learning and healthy childhood development (i.e. reducing risk of child abuse, neglect and family violence). Service providers need to adapt to the evolving needs of their clients and work in partnership with a range of services, including specialist services, possibly across sectors, to provide an effective response and positive outcomes.

Services in the Wellbeing and Safety program activity may have a focus on working specifically with children and families, or with young people, or both. The Wellbeing and Safety program activity is not restricted by program eligibility criteria. Rather, it is designed to be delivered flexibly in response to client needs.

Wellbeing and Safety providers may also work with victim-survivors of family violence and their children to help keep these families safe and strong. This may include:

- undertaking comprehensive assessment of strengths and needs, and safety planning
- identifying and working with children and young people as victims of family violence in their own right
- identifying and working in a family-led way towards holistic goals related to the safety, health, economic, education, community and cultural needs of all family members
- delivering a wraparound approach to case management that is therapeutic, trauma informed, and culturally safe and responsive
- providing specialised family violence referrals to address the needs of all family members.

PROGRAM ACTIVITY Wellbeing and Safety

Service types	
Counselling	Information / advice / referral
Education and skills training	Mentoring / peer support
Family capacity building	Parenting programs
Indigenous supported playgroups	Specialist support
Indigenous parenting programs	Supported playgroups
Youth individualised support	

See [Appendix D](#) for more information on the CAFS service types.

Wellbeing and Safety – evidence and program logics

The Wellbeing and Safety Program Logics incorporate evidence from the following evidence reviews:

- [Wellbeing and Safety \(Children and Families\) Program Logic](#) (from the [Preventing Child Maltreatment Evidence Review](#))
- [Wellbeing and Safety \(Young People\) Program Logic](#) (from the [Youth Socioemotional Wellbeing Evidence Review](#) and the [Youth Work – Agency and Empowerment Evidence Review](#)).

 Providing Wellbeing and Safety services to:	How do I develop my program logic?
Children and families	Service providers funded under the Wellbeing and Safety program activity providing services to children and families will: • develop an individual program logic using the Wellbeing and Safety (Children and Families) Program Logic, and • identify which Preventing Child Maltreatment core components they are delivering (see detail about core components below) within their program logic.
Young people	Service providers funded under the Wellbeing and Safety program activity providing services to young people will develop an individual program logic using the Wellbeing and Safety (Young People) Program Logic .
Both children and families, and young people	Service providers funded under the Wellbeing and Safety program activity providing services to both children and families and young people will develop individual program logics using: • Wellbeing and Safety (Children and Families) Program Logic, and • Wellbeing and Safety (Young People) Program Logic.

Wellbeing and Safety (children and families) – Preventing Child Maltreatment core components

Service providers funded in the Wellbeing and Safety program activity specifically working with children and families should use the core components from the [Preventing Child Maltreatment Evidence Review](#) in their service planning and delivery.

The [Evidence Portal](#) includes further information on the core components and the core components approach.

The Preventing Child Maltreatment Evidence Review identified the following five core components from evidence-informed programs:

- Engagement
- Case management
- Parental education, coaching and modelling
- Parental self-care and personal development
- Building supportive relationships and social networks.

These are recommended as standard components for effective delivery of child and family services working with families at risk of child abuse or neglect. To be effective in preventing child maltreatment, all five core components should be delivered to the child and their family.

As such, wherever possible, clients should have access to all five Preventing Child Maltreatment core components. To achieve this, service providers will deliver each core component or work in partnership with other service providers locally through coordinated referral pathways to ensure clients can access services that offer the other core components.

For example, supported playgroups deliver four of the five core components but are generally not expected to provide case management. A service provider may therefore need to build a referral pathway to a case management service for clients to access if appropriate, ensuring that clients have access to all five core components.

Service providers should look beyond the CAFS service system and into the broader early intervention network, when seeking out other agencies to partner with to deliver the core components. Partnerships and referral pathways to deliver the core components should be reflected in individual program logics.

A table of the Preventing Child Maltreatment core components matched to Wellbeing and Safety service types is available at **Appendix E**. Service providers can use this resource to cross-reference their service types against the core components to identify which components they are delivering.

Wellbeing and Safety (young people) – core components and best practice elements

Service providers in the Wellbeing and Safety program activity working with young people should consider the core components and best practice elements from the Youth Socioemotional Wellbeing Evidence Review and the Youth Work – Agency and Empowerment Evidence Review. These are captured in the Wellbeing and Safety (Young People) Program Logic.

The core components are:

- Self-concept, self-efficacy and confidence
- Mindfulness and self-regulation
- Prosocial skills and relationship building
- Building motivation and monitoring behavioural change
- Building knowledge and awareness for socioemotional wellbeing.

The four components of best practice in youth work are:

- **Connectivity:** development of programs and services that are long-term, sustainable and relationship based, birthed and sourced from within the community.
- **Strengths-based approach:** embracing notions of independence and autonomy among services for young people.
- **Capacity building:** ability to build capacity in terms of staff professional development, effective research, evaluation and information gathering and sharing, and leadership in the area of governance and management.
- **Contextual and systemic considerations:** consideration of macro contexts, including economic, political, social and cultural factors.

Additional requirements when delivering parenting programs and supported playgroups

The CAFS program is working towards an evidence-informed approach to service delivery. This means that wherever possible CAFS service providers should use evidence to design, implement and improve programs and services. This can be research evidence, lived experience and client voice, and professional and practitioner expertise.

For service providers delivering parenting programs and supported playgroups, the CAFS program has identified

evidence to support the selection of programs and models for delivery. The CAFS program's evidence-informed approach also includes identifying and supporting emerging, locally designed and applied parenting programs and supported playgroup models. This acknowledges that not all parenting programs and supported playgroup models identified in the evidence are appropriate or meet the needs of all families accessing CAFS services.

The term 'locally applied' is used here to refer to parenting programs and supported playgroup models that are either:

1. A program or model designed locally by the CAFS service provider, or
2. An existing program or model, not listed in the Evidence-Informed Parenting Program List (available on the [DCJ website](#)) or [Supported Playgroup Rapid Evidence Scan](#), or
3. An adaptation of an existing program or model.

Parenting programs

Parenting programs align with one of the Preventing Child Maltreatment core components: parental education, coaching and modelling.

When delivering parenting programs, service providers will select an evidence-informed program where possible. To help service providers find a suitable option, the CAFS program has a list of evidence-informed parenting programs (available on the [DCJ website](#)). Providers should review the evidence-informed list and select a program where it is suitable and relevant to their local context and client and community need.

If a provider considers a 'locally applied' program is more suitable in their local context, they can propose this option to their DCJ contract manager. They will need to complete a form (available on the [DCJ website](#)) to outline the proposed program and the rationale for selecting this instead of a program from the evidence-informed list.

Providers should also consider the location parenting programs are delivered, noting that social stigma remains a factor influencing some individuals from accessing these programs. Consider hosting the parenting program in a neutral location, rather than at the service provider's office. This should also be considered when delivering supported playgroups.

As with all CAFS services, parenting programs should be offered free of charge.

Supported playgroups

Supported playgroups align with four of the [Preventing Child Maltreatment core components](#).

Supported playgroups involve engaging parents and caregivers to meet and learn new parenting and play skills in a positive environment. The CAFS program supports evidence-informed supported playgroup models identified through the [Supported Playgroup Rapid Evidence Scan](#). This scan provides a summary of the best available evidence on outcomes for children and families attending supported playgroups.

The scan identified the following supported playgroup models with the strongest evidence:

- Kids in Transition to School (KITS)
- smalltalk
- PEEP Learning Together Program (PEEP-LTP)
- Learn, Engage and Play (LEaP)
- Parent-Child Mother Goose.

The scan also examines elements of effective playgroup formats and identifies best practice principles. These should always be considered when planning the design and implementation of playgroups. The scan provides details of the models identified in the evidence.

Service providers delivering supported playgroups should aim to select one of the models from the scan. When selecting a supported playgroup model, providers should always consider the available evidence, local context, and client and community need.

If a service provider considers a 'locally applied' supported playgroup model more suitable in their local context, they can propose this option to their DCJ contract manager. In this case, a provider will need to complete a form (available on the [DCJ website](#)) to outline the proposed model (or adaptation), the rationale for why it is suited to the local context (instead of an evidence-informed model identified in the scan) and any evidence available to demonstrate its effectiveness.

Providers who select to deliver a 'locally applied' supported playgroup model must consider and seek to align their model with the [best practice principles](#) identified in the evidence scan and with the [Early Years Learning Framework](#) where possible and appropriate.

Indigenous parenting programs

Indigenous parenting programs are a specific parenting program service type delivered by Aboriginal staff to Aboriginal parents or carers, or parents or carers of Aboriginal children. They provide support specifically targeted at understanding and strengthening parent-child relationships through education, knowledge or practical skill building for parents.

Service providers delivering Indigenous parenting programs are **not** required to select a parenting program from the evidence-informed parenting program list and are exempt from the assessment process for locally applied programs.

Indigenous parenting programs should be designed with community and practitioner expertise, with reference to the [Aboriginal-led Early Support Evidence Review](#).

Indigenous supported playgroups

Indigenous supported playgroups are a specific supported playgroup service type delivered by Aboriginal staff to Aboriginal parents and carers, or parents and carers of Aboriginal children, to share experiences of parenting and learn new parenting skills while being supported by workers who coordinate the activities.

Service providers delivering Indigenous supported playgroups are **not** required to select a supported playgroup model from the [Supported Playgroup Rapid Evidence Scan](#) and are exempt from the assessment process for locally applied models.

Indigenous supported playgroup models should be locally designed with input from community and practitioner expertise. Indigenous supported playgroup models should also be designed to align with the [best practice principles](#) and [additional key elements of supported playgroups delivered to Aboriginal families](#) identified in the evidence scan and with the [Early Years Learning Framework](#) where possible and appropriate.

The [Aboriginal-led Early Support Programs Evidence Review](#) identified eight common themes among the highly rated evidence about Aboriginal-led early support programs designed for Aboriginal children, young people, families and communities. Service providers delivering Indigenous supported playgroups should consider these common themes when delivering services.

Supported playgroups and parenting programs for Culturally and Linguistically Diverse communities

People from culturally and linguistically diverse communities can face a number of barriers to accessing services and may experience increased levels of social isolation. Supported playgroups and parenting programs may be especially beneficial for this group. When delivering parenting programs or supported playgroups to culturally and linguistically diverse communities, providers should consider using a culturally and linguistically diverse and/or bi-lingual facilitator from the same community and providing translated or adapted resources, where possible.

4 Evidence-informed services

4.1 The evidence base

In 2015, the Australian Research Alliance for Children and Youth (ARACY) in partnership with the NSW Government, released Better systems, better chances: A review of research and practice for prevention and early intervention. The report provided a strong evidence base for the CAFS program, including that protective and risk factors at individual, family and community levels are highly predictive of life outcomes, and effective prevention and early intervention can dramatically change life trajectories.¹³

The CAFS program has a growing evidence base. DCJ recognises the role of practitioners and local services in contributing to and building the early intervention evidence base through local design and innovation. As part of continuous service improvement, these Program Specifications outline how the program has evolved and been reshaped to use insights and evidence. They also provide guidance to service providers about how to use the available evidence in service design and delivery.

4.2 Evidence-informed approach

The CAFS program has an evidence-informed approach to design and practice. An evidence-informed approach uses three different types of evidence to inform service design and decision-making:

- Research evidence and data¹⁴
- Qualitative data such as lived experience, client voice and client feedback
- Practitioner expertise and local knowledge.

To support the sector to implement and engage with the research evidence, DCJ has:

- developed and published a number of evidence reviews with research partners
- developed a core components approach to preventing child maltreatment for the Wellbeing and Safety program activity
- commissioned the Targeted Earlier Intervention Evaluation and the Family Connect and Support Evaluation. Both evaluations were independently conducted.

The commissioned evidence is available on the DCJ Evidence Portal.

¹³ Fox, S., Southwell, A., Stafford, N., Goodhue, R., Jackson, D. and Smith, C. (2015). Better systems, better chances: a review of research and practice for prevention and early intervention. Australian Research Alliance for Children and Youth (ARACY); Early Intervention Foundation. (2018). *Realising the potential of early intervention*. <https://www.eif.org.uk/report/realising-the-potential-of-early-intervention>

¹⁴ DCJ notes that there are limitations associated with the accuracy of data and research evidence relevant to Aboriginal peoples. Further work is in progress to address these limitations.

5 Client outcomes frameworks

5.1 Client Outcomes

The NSW Human Services Outcome Framework focuses on outcomes across seven domains (safety, home, economic, health, education and skills, social and community, and empowerment) and provides a mechanism for monitoring and reporting progress on the outcomes of clients participating in government and non-government programs across NSW.

The CAFS program has developed a CAFS Program Client Outcomes Framework (**Appendix B**) to align with the NSW Human Services Outcomes Framework. The CAFS framework provides a roadmap for linking the CAFS program and any program activities to improved client outcomes. The framework articulates what the program (as a whole) aims to achieve for children, young people, families and communities in NSW.

The overarching CAFS program client outcome is achieving **safety and wellbeing at home**.

Service providers should aim to work towards one or more of the outcomes in the framework with the understanding that each of the client outcomes in the framework contributes to the program's overarching outcome.

To measure how each service provider is working towards these long-term outcomes, client information is recorded systematically through the Data Exchange (DEX). Specifically, short-term client outcome data will be collected through the Standard Client / Community Outcomes Reporting (SCORE) Framework. To support the standardised collection of outcomes, SCORE domains and related validated outcome measurement tools have been aligned with the overarching CAFS program client outcomes.

See **Appendix B** for the CAFS Program Client Outcomes Framework.

5.2 Outcomes for Aboriginal people

Outcomes for Aboriginal people in the CAFS program (**Appendix C**)¹⁵ have been designed with ACCOs and Aboriginal staff in the CAFS program. These are additional client outcomes developed to reflect Aboriginal values, priorities and worldviews.

The Outcomes for Aboriginal people in the CAFS program are additional to the CAFS Program Client Outcomes Framework (**Appendix B**). Service providers working with Aboriginal people are still required to report CAFS program outcomes in DEX but are not required to report the *Outcomes for Aboriginal people in the CAFS program* (**Appendix C**) in DEX.

DCJ will continue to co-design with ACCOs and Aboriginal staff in the CAFS program to implement the outcomes for Aboriginal people.

¹⁵ ©Yirra Miya. For more information on the meaning of Yirra Miya's cultural panel, visit our CAFS webpages on the DCJ website.

6 Service system outcomes and key program requirements

6.1 Service system outcomes

Improving the wellbeing of children, young people, families and communities requires a flexible and responsive service system able to respond quickly and effectively to emerging issues and challenges.

Seven service system outcomes have been developed to describe the outcomes that the CAFS program aims to achieve as a sector to improve client and community outcomes.

Organisations delivering the community sector coordination service type play a fundamental role in supporting the CAFS sector to deliver the service system outcomes. These organisations will be specifically contracted to deliver services aligned to the CAFS Service System Outcomes and are expected to demonstrate their contribution to achieving them through the Community Sector Coordination reporting tool.

The seven service system outcomes are:

Further detail on the CAFS Service System Outcomes is in [Appendix F](#).

6.2 Key program requirements

Aligned with the CAFS Service System Outcomes, there are seven key program requirements that all service providers must use in their service delivery. By meeting the key program requirements, service providers contribute to achieving the service system outcomes.

The seven key program requirements are:

1. Supporting the cultural safety and wellbeing of Aboriginal people
2. Supporting the cultural safety and wellbeing of culturally and linguistically diverse communities
3. Free and accessible services
4. Flexible timeframes
5. Effective engagement and assessment
6. Identifying and responding to family violence
7. Referral pathways and sector collaboration, including referrals to early years services and supports.

Each key program requirement is described below. First, the table shows the alignment between the service system outcomes and program requirements.

6.2.1 Supporting the cultural safety and wellbeing of Aboriginal people

DCJ acknowledges the suffering and trauma inflicted on Aboriginal children, young people and families through colonisation and forced assimilation practices. DCJ recognises the effects of this trauma, which continues to affect Aboriginal people today, and that Aboriginal children and families continue to be disproportionately affected by the statutory system.

A lack of cultural safety, racism and mistrust are barriers to accessing essential services. Supporting the wellbeing of Aboriginal children, young people, families and communities through the delivery of culturally safe and responsive services is critical to achieving positive outcomes for Aboriginal clients. CAFS services focus on healing and trauma-informed responses.

Cultural safety means ‘an environment which is spiritually, socially and emotionally safe, as well as physically safe for people; where there is no assault, challenge or denial of a person’s identity, of who they are and what they need’.¹⁶

Cultural safety and responsiveness is a key CAFS service system outcome. ACCOs are best placed to understand the cultural safety and wellbeing needs of their clients and communities. Given its importance, a separate program logic has been developed to reflect the requirements and responsibilities of non-ACCOs to apply cultural safety and wellbeing to service design and delivery.

The Cultural Safety and Wellbeing Program Logic is at [Appendix A](#).

This program logic is based on evidence from the [Cultural Safety and Wellbeing Evidence Review](#). Additional evidence is available in the [Aboriginal-led Early Support Programs Evidence Review](#).

The [Cultural Safety and Wellbeing Evidence Review](#) identified the six critical elements of cultural safety:

- **Recognising the importance of culture:** culturally safe service delivery begins with understanding the importance of connection and culture in the lives of Aboriginal peoples. Culture is integral to a sense of identity as the First Peoples of Australia, and being connected to culture, Country and kin is a protective factor for Aboriginal children, young people and families.
- **Self-determination:** the right to self-determination for Aboriginal peoples is affirmed in the United Nations Declaration on the Rights of Indigenous Peoples and endorsed by the Australian Government. Services should be co-designed with the local Aboriginal community to ensure their cultural knowledge, values and beliefs are embedded in service offerings, and that community support needs are addressed. Services should seek feedback from Aboriginal clients on their experience of receiving support and feelings of empowerment. This element is reinforced by the [Aboriginal-led Early Support Programs Evidence Review](#).
- **Workforce development:** culturally safe service delivery depends on a highly skilled and capable workforce. This includes recruiting, training and supporting more Aboriginal workers in the sector and providing education and training to non-Aboriginal workers so that they learn the history of Aboriginal people’s experiences, develop high levels of cultural awareness and know how to deliver culturally safe and effective services.
- **Whole of organisation approach:** cultural safety should be embedded into the organisation’s way of working and not be an add-on component of practice. This requires consideration of the policies and focus of the service, the physical location and environment, management and governance systems, human resources, and organisational processes such as data collection.

¹⁶ Williams (1999), cited in Bin-Sallik, M. (2003). Cultural safety: Let’s name it! *The Australian Journal of Indigenous Education*, 32, 21–28.

- **Leadership and partnership:** organisational leaders are responsible for embedding cultural safety within organisational governance, strategic planning and program implementation, and for building long-term partnerships with Aboriginal communities and representatives. This includes building effective partnerships between the service and Aboriginal clients and communities.
- **Research, monitoring and evaluation:** research and ongoing monitoring and evaluation are foundational to culturally safe service delivery.

The Aboriginal-led Early Support Programs Evidence Review identified the following eight features of Aboriginal-led early support programs:

- Community designed or co-designed
- Community led
- Cultural safety
- Strengths-based, culture-affirming approaches
- Trauma informed and healing focused
- Holistic, wraparound components
- Collaboration and coordination with mainstream services
- Flexible delivery.

This program requirement aligns with the following service system outcomes:

6.2.1.1 Aboriginal Case Management Policy

Aligning CAFS service delivery to the Cultural Safety and Wellbeing Program Logic ([Appendix A](#)) and the eight features of the Aboriginal-led Early Support Programs Evidence Review is one of the ways the CAFS program is putting the Aboriginal Case Management Policy (ACMP) into practice. The ACMP aims to empower Aboriginal families and communities to participate in decision-making and keep children safe at home and connected to kin, community and Country.

6.2.1.2 What is expected of service providers?

All service providers, both ACCOs and non-ACCOs, should reflect the eight features of Aboriginal-led early support programs from the Aboriginal-led Early Support Programs Evidence Review in their service design and delivery when working with and delivering services to Aboriginal people and communities.

All CAFS non-ACCO service providers are expected to adopt the principles and practice elements of the Cultural Safety and Wellbeing Program Logic ([Appendix A](#)) in their service design and delivery.

DCJ contract managers and CAFS non-ACCO services will discuss progress during regular contract management meetings (at a minimum quarterly), and DCJ contract managers will be responsible for monitoring the progress of these providers (see also [section 7](#)).

6.2.2 Supporting the cultural safety and wellbeing of culturally and linguistically diverse communities

Supporting the wellbeing of CALD children, young people, families and communities through the delivery of culturally safe and responsive services is critical to achieving positive outcomes for clients.

Program data reported in DEX highlights the high proportion of children, young people and families from CALD communities in parts of NSW. It is critical that service providers design and deliver culturally safe services to support these communities.

A culturally safe and responsive service includes:

- being curious and respectful of children, young people and family's culture, race, nationality, beliefs and strengths and the different ways these influence parents/caregivers to raise children
- being genuine in seeking to understand how culture is lived, and how individuals are connected to family, community and culture
- recognising children, young people and their parents or carers may have mixed heritage and the influence this will have on their lived experience of culture
- recognising the tension that may exist for some people whose values and choices differ from the cultural norms, traditional practices, beliefs and values of their community
- developing a good working knowledge of local cultural community and multicultural services and seeking their expertise in service design and delivery
- developing knowledge of cultural norms around gender roles, parenting practices and the perceptions of child development
- acknowledging culture as a source of strength, protection and resilience for families when managing worries or risks
- recognising and being respectful of the different lived experiences and values of children, young people, families and communities, including the traumatic experiences associated with war, persecution, natural disasters and other reasons for displacement
- adapting communication to the context and dynamics of the families to enable culturally safe discussion about child development and child safety in an Australian context
- recognising the unique challenges associated with resettling in a new country
- supporting community-led strategies that provide culturally appropriate and accessible information about safety and wellbeing.

This program requirement aligns with the following service system outcomes:

6.2.3 Free and accessible services

CAFS services are available at no cost to the client. There are no eligibility criteria or need for a diagnosis to access CAFS services.¹⁷

The CAFS program is designed to be delivered flexibly in response to client needs. This includes delivering services to people on various visa types.

Service providers will ensure services are delivered in accessible locations and actively work to overcome barriers to client access. Potential barriers could include:

- logistical barriers (e.g. service locations and access to transport options)
- physical barriers (e.g. inaccessible buildings and facilities)
- language and cultural barriers
- psychological barriers.

It is important to consider the physical location and environment of service delivery, removing any potential stigma and ensuring the service is culturally safe for Aboriginal families.

Other examples of ways to increase accessibility include:¹⁸

- **providing services in central locations:** ensures activities are available to a large amount of people and close to public transport.
- **providing services in spaces clients already access or in everyday settings:** for example, the local GP or hospital. This removes the need for clients to find the service and reduces stigma.
- **providing safe and comfortable spaces for diverse client needs:** for example, quiet zones and sensory rooms, prayer rooms, accessible toilets.
- **providing child care:** enables people with caring responsibilities to participate in activities and receive the services they need.
- **providing transportation:** includes pick up and drop off for clients or providing a bus or carpool service. It could also include providing clients with vouchers for public transport and taxis.
- **offering services in multiple languages and translated resources:** enables clients who speak or read languages other than English to access the same resources. Practitioners who speak the same languages as clients can foster positive relationships.
- **providing services online (where possible and appropriate):** removes any geographical or transport barriers clients may face.

Clients should have information about the service or centre and what to expect before they access it. This will help address any concerns and encourage them to access it. Services should provide detailed information in their promotional materials and websites, such as accessibility features, opening hours, services and activities offered, staff languages spoken, complaint handling and client feedback processes, transport options and so on.

¹⁷ The Family Connect and Support (FCS) program has suitability criteria. See [section 3.3](#) for further information.

¹⁸ Preventing Child Maltreatment Evidence Review Flexible Activity – [Removing Barriers to Participation \(DCJ Evidence Portal\)](#).

This requirement aligns with the following service system outcomes:

6.2.4 Flexible timeframes

There is no specific time limit on the duration a service provider in the Community Strengthening and Wellbeing and Safety program activities can work with a client (unless specifically negotiated in their contract). Services and supports are designed to focus on achieving the client's needs and goals and tailored to their needs and unique circumstances, rather than requiring them to fit into set timeframes.

Service providers should work with clients as long as required to achieve positive outcomes.

There is a timeframe for the FCS program activity: clients can receive FCS services for a maximum of six months. See [section 3.3](#) for further detail.

This program requirement aligns with the following service system outcomes:

6.2.5 Effective engagement and assessment

Effective engagement is fundamental to ensuring clients stay engaged with a service until they have achieved their goals or their needs have been met.

All service providers should engage clients using practices that emphasise listening and developing trust, breaking down participation barriers and delivering services flexibly to meet client needs.

Effective assessment supports the early identification of developmental concerns and vulnerabilities and facilitates access to targeted supports and services.

Engagement is one of the five core components from the [Preventing Child Maltreatment Evidence Review](#) (see [section 3.3](#)). As engagement is relevant to all CAFS program activities, service providers must use the core components evidence to inform their engagement practice. Further information on core components evidence is available on the [Evidence Portal](#).

The [Common Assessment Tool \(CAT\)](#) has been designed for use by practitioners conducting comprehensive assessments with clients and families in the CAFS program. The CAT guides practitioners in holistic, strengths-based assessment of family strengths and needs based on all domains of a family's life, and also provides advice about engaging with families in respectful and safe ways – for example, when discussing family violence.

Where a comprehensive assessment is required, service providers should use the CAT or another suitable and culturally appropriate assessment tool, however use of the CAT is optional for service providers delivering Community Strengthening, and Wellbeing and Safety program activities. Use of

the CAT, though, is mandatory for service providers delivering the Family Connect and Support program activity.

Assessment tools used in CAFS can support practitioners to identify and respond to signs of family violence.

This requirement aligns with the following service system outcomes:

6.2.6 Identifying and responding to family violence

Family violence is prevalent in the community and impacts not only victim-survivors but also children and young people in their care. Victim-survivors and their children may access services from all CAFS program activities, noting that family violence may not be their main reason for seeking help. Service providers must understand the differing roles that they can play in supporting victim-survivors at individual, family and community levels. This may include keeping them safe from immediate harm and supporting their ongoing wellbeing and recovery. For example:

- Family capacity building can support safety planning and referrals to specialist services.
- Education and skills training can include activities that promote the development of respectful relationships and address unhealthy and harmful gender-based attitudes.

CAFS practitioners will maintain awareness and understanding of the nature and cycle of family violence, including coercive control. CAFS providers must ensure a sensitive approach to engaging and supporting victim-survivors and their children and use assessment tools to identify and respond to indicators of family violence.

CAFS services will have a sound working knowledge of specialised family violence services and referral pathways within their local area and nearby communities. Where possible and appropriate, CAFS services will make referrals for perpetrators of violence to accredited behaviour change and specialist programs. Where referrals are made, CAFS will work in partnership with perpetrator services and programs to support the safety and wellbeing of victims including as needed, using the provisions of Chapter 16A to share relevant information.

This requirement aligns with the following service system outcomes:

6.2.7 Referral pathways and sector collaboration

Clients may be referred to a CAFS service provider in a number of ways:

- Self-referral
- DCJ referral

- Community referral
- Child Wellbeing Unit referral
- Referral from other professionals or service providers.

Children, young people and families are better supported in their local service system when there is strong collaboration between services. Providers should work closely and collaboratively with other child and family services (including those funded or provided by other NSW and Australian Government agencies), Child Wellbeing Units and more intensive, multidisciplinary and specialist services (including services working with perpetrators of family violence). This is to ensure families can access timely and culturally appropriate services and referrals at the right time to meet their needs.

Education, advocacy and capacity building are also key to the referral process. Service providers should build and maintain strong relationships with other local services, educate them about their service and upskill each other about local referral pathways.

Where appropriate, service providers are encouraged to attend and participate in various networking and information sharing events and groups to share information, build relationships and collaborate.

These formal and informal collaborative partnerships and activities will continuously improve supported referral pathways, connections and sector capacity building within the local community and service system.

This requirement aligns with the following service system outcomes:

6.2.7.1 Referrals to early years services and supports

Service providers in the CAFS program play an important role in addressing barriers and improving a child's access to early years services, such as early childhood education (ECE), health and development checks, and therapeutic and allied health services.

Research shows that children who attend ECE are significantly less likely to be developmentally vulnerable when they start school.¹⁹ Children experiencing high levels of disadvantage face more barriers to accessing early childhood education and care and are therefore less likely to attend, despite being the most likely to benefit.²⁰ These children are also less likely to have access to health and development checks, missing the opportunity to identify and address health issues early.

Where appropriate, service providers should consider opportunities in their program design and delivery to support children's and families' access and participation in early years services such as ECE and their access to health and development checks. This includes identifying and removing barriers for children and families and working with local services including ECEs to develop and strengthen referral pathways. This will enable children to benefit from the educational, social and health benefits of early years services.

¹⁹ Molloy, C., Quinn, P., Harrop, C., Perini, N., & Goldfeld, S. (2019). Restacking the odds – *Communication summary: Early childhood education and care: An evidence-based review of indicators to assess quality, quantity, and participation*.

7 Performance and outcome measures

DCJ funded programs must align to the NSW Human Services Outcomes Framework.

The NSW Human Services Outcomes Framework provides a way to understand and measure the extent to which DCJ makes a long-term positive difference to people's lives and enables us to build evidence of what works in improving wellbeing.

The NSW Human Services Outcomes Framework contains the following elements:

- Clearly defined desired outcomes for DCJ clients and populations.
- Evidence of the services and supports needed to achieve the desired outcomes.
- Data collection and analysis to report the extent to which those outcomes are being achieved.

Service providers should refer to the CAFS Program Client Outcomes Framework ([Appendix B](#)) and CAFS Program Logics ([Appendix A](#)), which identify specific client and system outcomes for the CAFS program.

Service providers will be contracted to achieve specific CAFS client outcomes for target groups. These outcomes will be measured in DEX.²¹

Organisations delivering the community sector coordination service type will be contracted to achieve CAFS Service System Outcomes, rather than client outcomes. These outcomes will be measured outside of DEX in the Community Sector Coordination reporting tool.

All service providers must align their service delivery with the CAFS Service System Outcomes and the program requirements. The Culturally safe and responsive service system outcome and corresponding program requirement Supporting the cultural safety and wellbeing of Aboriginal people will be monitored by DCJ contract managers during regular contract management meetings.

²¹ Service providers are not required to report on Outcomes for Aboriginal people in the CAFS program in DEX.

8 Reporting and data collection

8.1 Data Exchange (DEX)

All CAFS service providers must collect and report data through the Data Exchange (DEX) in accordance with [The Data Exchange Protocols](#) and [Program specific guidance for Government of New South Wales programs](#). All service providers must participate in the DEX 'partnership approach', which includes reporting on an extended dataset and recording client and community outcomes through the Standard Client / Community Outcomes Reporting (SCORE).²²

The main focus of the partnership approach is collecting information about the outcomes achieved by clients as a result of service delivery. The partnership approach also includes some extended data items that provide additional information about client demographics, needs and circumstances.

Service providers must have systems in place to meet data collection and reporting obligations.

Performance information such as client characteristics and service delivery must be collected by each service provider and reported into the DEX portal either directly, by system-to-system transfer or by bulk XML file upload.

The performance information reported through DEX includes:

- client identity characteristics (given and family names, date of birth, gender and residential address)
- client demographic characteristics (Indigenous status, cultural and linguistic diversity, and disability status, impairment or condition)
- service delivery information (outlets, cases, sessions)
- client or community/group outcomes data.

In the CAFS program, 'clients' are children, young people, families and communities and their data and outcomes are reported on DEX. CAFS service providers and their staff who receive services through the community sector coordination service type are not considered clients and should not be reported on DEX.

DEX has two standardised six-monthly performance reporting periods, from 1 July to 31 December and from 1 January to 30 June, with a 30-day close-off period after each. Data reporting is ongoing, but once the 'closing period' is complete, no further changes can be made to the data.

Information must be provided in accordance with the [Data Exchange Protocols](#).

For more information about using DEX including resources and support visit the [DCJ website](#).

8.1.1 DCJ reporting requirements

Service providers can enter data at any time within a reporting period. DCJ requires providers to do so regularly and at least quarterly. Quarterly reporting allows for more effective and informed monitoring and improvement.

²² The community sector coordination service type does not need to be reported in DEX.

Reporting system	Reporting period	Data entry frequency
Data Exchange	1 January – 31 March each year	Ongoing – all data to be entered or uploaded into system 30 days after each reporting period.
Data Exchange	1 April – 30 June each year	Ongoing – all data to be entered or uploaded into system 30 days after each reporting period.
Data Exchange	1 July – 30 September each year	Ongoing – all data to be entered or uploaded into system 30 days after each reporting period.
Data Exchange	1 October – 31 December each year	Ongoing – all data to be entered or uploaded into system 30 days after each reporting period.

Service providers can transfer their data to DEX in one of three ways:

- system to system transfer
- bulk XML file upload
- direct manual entry into the DEX web-based portal.

Service providers can access their own set of reports in DEX which reflect the information they have submitted. Additional reports will be available to service providers as participants in the partnership approach.

8.1.2 Additional reporting requirements and information

- Service providers must ensure that adequate financial and operational records are kept and maintained during the term of their contract.
- Service providers must also comply with the data collection and reporting practices outlined in the [CAFS Data Collection and Reporting Guide](#).
- Services contracted to deliver the community sector coordination service type are not required to report on them in DEX. DCJ has developed a Community Sector Coordination reporting tool for organisations who deliver these activities.
- Further resources and guidance for accessing and using DEX can be found on the [DCJ website](#). This includes resources about using data in the CAFS program and setting up cases, sessions and clients in DEX.

8.2 Indigenous Data Governance

The CAFS program is committed to and has a focus on Indigenous Data Governance, consistent with Closing the Gap National Agreement priority reform four ‘Shared access to location specific data and information at a regional level’.

ACCOs in the CAFS program currently have access to **all** data collected and reported by their organisation and can access and share that data with their stakeholders and community at any time. CAFS program data at a state and local government area level are also currently publicly available through the [TEI](#) and [FCS](#) dashboards.

The aim is for Aboriginal CAFS service providers to:

- be engaged and lead in decision-making about data
- have the opportunity to give feedback that is valued and recognised by DCJ
- lead localised data development activities that are useful for community to enhance data collection
- generate genuine opportunity for greater authority to manage, govern and own data routinely collected

- build capability and expertise to collect, manage and store data effectively.

CAFS will continue to support and work with service providers to support Indigenous Data Governance that meets the needs of local communities. The CAFS program will support ACCOs to:

- engage with their local communities to identify local priorities for data collection and drive community-led initiatives that support self-determination through community decision-making
- have the resources to develop their own data collection and storage
- generate data sharing protocols that build on service provider capacity to advocate for the service systems their communities require (e.g. share of associated datasets)
- build technical capability to collect, analyse and report data
- use data to highlight strengths and capacity building perspectives as opposed to risks and gaps
- have the skills to understand the information in DEX reports, where CAFS program data supports local priorities and needs.

By empowering Aboriginal service providers to be custodians of their data, data will provide a more meaningful and accurate representation of the outcomes clients and communities achieve.

8.3 Qualitative data reporting

Qualitative data collection is optional in the CAFS program and may be reported to DCJ contract managers outside DEX in a format that best suits the service provider, such as annual reports, photos, stories and discussions during meetings.

Qualitative data can be used to tell the story behind the data reported in DEX by providing important insights into clients' unique experiences and the impact of services. The CAFS program recognises the value of qualitative data gathered through client perspectives and feedback to inform an evidence-informed approach, and for designing and delivering effective services to meet client needs. Qualitative data such as narratives, case studies, storytelling and yarning circles are often the preferred way for Aboriginal people and communities to engage and demonstrate outcomes. Wherever possible, qualitative feedback should be linked to the CAFS Program Client Outcomes Framework ([Appendix B](#)) and the Outcomes for Aboriginal people in the CAFS program ([Appendix C](#)). This will help to demonstrate how lived experience and the impact of CAFS services support the quantitative data.

It is recommended that service providers only collect qualitative data if they:

- have somewhere safe to store the data (qualitative data cannot be stored in DEX)
- have the capacity and capability to analyse the data
- will use the data to better understand client needs and outcomes
- will use the data to improve service delivery and design.

Service providers should ensure their practices for collecting, using and disclosing clients' personal and health information complies with privacy legislation. Clause 18 of the Agreement for Funding of Services – Standard Terms includes service providers' obligation to comply with the following Acts and any codes of principles and practice issued under those Acts.

- *Privacy and Personal Information Protection Act 1998 NSW (PPIP Act)*
- *Health Records and Information Privacy Act 2002 (HRIP Act)*
- *Privacy Act 1988.*

The CAFS program will work to support qualitative data collection and reporting, particularly to ensure it is culturally safe and responsive.

8.4 Other reporting

8.4.1 Cultural safety and wellbeing reporting

Supporting the wellbeing of Aboriginal children, young people, families and communities is a central requirement of the CAFS program. Service providers must report on their progress to deliver culturally safe and responsive services.

DCJ contract managers and non-ACCOs will discuss examples of how service providers are using the principles of the Cultural Safety and Wellbeing Program Logic ([Appendix A](#)) and [Aboriginal-led Early Support Programs Evidence Review](#) in practice during regular contract management meetings, at a minimum quarterly.

See [section 6.2](#) for further detail.

8.4.2 Program logics

Service providers must have a program logic in place and review this annually with their DCJ contract manager. This will ensure that all program logics are an accurate representation of the service provider's activities, and reflective of the needs of the community. It is also recommended that service providers periodically review their program logic to ensure continuous quality improvement. Service providers must review their program logic at least annually and/or when there is a contract variation or when service delivery changes.

8.4.3 Community Sector Coordination reporting tool

The community sector coordination service type (under Community Strengthening) data is reported outside of DEX. DCJ has developed a Community Sector Coordination reporting tool for organisations who deliver these activities.

Reporting on the community sector coordination service type can happen at any time within the reporting periods, at least 6 monthly via your DCJ contract manager.

See the [CAFS Data Collection and Reporting Guide](#) for more information about reporting on the community sector coordination service type and the Community Sector Coordination reporting tool.

9 Notified policies

All service providers must be familiar with the following policies, legislation, guidelines and frameworks. This includes understanding the requirements and their obligations and responsibilities within them.

- [Legislation and policies](#)
- [Funded Contract and Management Framework](#)
- [NSW Interagency Guidelines](#)
- [NSW Practice Framework](#)
- [Child Safe Standards](#)
- [NSW Mandatory Reporter Guide](#)
- [Aboriginal Case Management Policy](#)

Further news, policies, resources, tools and other information for service providers contracted to deliver human services, can be found on the [DCJ website](#).

Policies change from time to time. Service providers must ensure that they are referencing the latest version.

Appendix A: Program Logics

Please note: Each program logic should be read in conjunction with the CAFS Program Specifications.

Cultural Safety and Wellbeing Program Logic²³

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	SERVICE SYSTEM OUTCOMES
Aboriginal and Torres Strait Islander children are overrepresented at multiple points along the child protection continuum.²⁴ Aboriginal and Torres Strait Islander children are significantly overrepresented in Out-of-Home Care (OOHC).²⁵ Aboriginal children make up 42% of children in OOHC but represent just 5.9% of the total child population in Australia.²⁶ Under the National Agreement on Closing the Gap, there is a commitment from government to reduce the rate of overrepresentation of Aboriginal and Torres Strait Islander children in OOHC by 45% by 2031.²⁷ If current conditions are maintained, it is projected that the number of Aboriginal children reported at risk of significant harm (ROSH) and the rate of Aboriginal children in OOHC per 1,000 population will continue to grow.²⁸ Anecdotal evidence suggests that Aboriginal or Torres Strait Islander children entering OOHC have often not received	Gamarada Universal Indigenous Resources Pty Ltd and the Social Policy Research Centre conducted an evidence review to identify activities, practices or principles that ensure the cultural safety and wellbeing of Aboriginal children, young people, families and communities in early intervention services. This <u>Cultural Safety and Wellbeing Evidence Review</u>, conducted in 2021, identified <u>six critical elements</u> of culturally safe service delivery for the early support sector: 1. Recognising the importance of culture Culture is integral to a sense of identity as the First Peoples of Australia, and being connected to culture is a protective factor for Aboriginal children, young people and families. This is why culturally safe service delivery begins with understanding the importance of culture in the lives of Aboriginal peoples. 2. Self-determination Self-determination is a founding principle of cultural safety. The right to self-determination for Indigenous peoples is affirmed in the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP) and endorsed by the Australian Government. 3. Workforce Development Culturally safe service delivery is dependent upon a highly skilled and capable workforce. For practitioners working in child protection and early intervention, this requires both clinical and/or skill-based competence, as well as	The <u>six critical elements</u> described in the Cultural Safety and Wellbeing Evidence Review will help to ensure the delivery of culturally safe and responsive services for Aboriginal children, young people, families and communities, and may be implemented in different ways to account for the diversity of service providers, service offerings and clients. These critical elements can be tailored to the local needs of communities; the individual preferences of clients; and availability of service system resources (including referral pathways). Each critical element has flexible activities that describe different ways it can be implemented, as follows: 1. Recognising the importance of culture Flexible activities: - Acknowledge Aboriginal and Torres Strait Islander peoples as the traditional owners of the lands and waters of Australia. - Mark organisational spaces and services as valuing First Nations cultures and welcoming to Aboriginal and Torres Strait Islander clients by displaying for example Aboriginal signage and artwork; incorporating Aboriginal history, language, stories and songs into services where appropriate. 2. Self-determination Flexible activities: - Cultural safety initiatives are directed and guided by Aboriginal and Torres Strait Islander practitioners and others with local cultural expertise and/or authority. - Co-design services with the local Aboriginal community to ensure that their cultural knowledge, values and beliefs are embedded in service offerings, and that community support needs are addressed. - Seek feedback from Aboriginal clients on their experience of receiving support and feelings of empowerment. 3. Workforce Development Flexible activities: - Recruit Aboriginal staff and volunteers and actively support them through ongoing training, mentoring and career progression strategies.		Lack of cultural safety, racism and fear are the main barriers to accessing essential services. Supporting the wellbeing of Aboriginal children, young people, families and communities through the delivery of culturally safe services is critically important for achieving positive outcomes for clients. The delivery of all the following critical elements by service providers will help to achieve the delivery of culturally safe CAFS services for Aboriginal children, young people, families and communities: - Recognising the importance of culture - Self determination - Workforce development	Cultural Safety and Wellbeing CAFS services are culturally safe and inclusive.

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	SERVICE SYSTEM OUTCOMES
earlier interventions to keep them safely at home.²⁹ Longitudinal research conducted by Dr B J Newton on the rate of restoration for Aboriginal children indicated that of the 1018 Aboriginal children in the study, 15.2% were restored, while around 40% of children entered OOHC following just one (or no) substantiated ROSH reports.³⁰ Barriers for Aboriginal and Torres Strait Islander people accessing support earlier include fear of child removal through seeking support.³¹ To overcome this, culturally safe services are required to be delivered by early support service providers.	cultural competence. The literature indicates that this can be achieved through two key strategies: - Recruiting, training and supporting more Aboriginal workers in the sector; - Providing education and training to non-Aboriginal workers so that they learn the history of Aboriginal people's experiences with the welfare system; develop high levels of cultural awareness and appreciation; and know how to deliver culturally safe and effective services. 4. Whole of organisation approach Cultural safety is the responsibility of the whole organisation, not just of practitioners. As asserted in the recently released National Principles for Child Safe Organisations, applying cultural safety across all levels of the organisation is a way of addressing the racism and discrimination that still exists across the health and human service systems today, and that often leads to a reluctance on the part of Aboriginal people to seek help. 5. Leadership and Partnership Organisational leaders are responsible for embedding cultural safety within organisational governance, strategic planning, and program implementation, and for building long-term partnerships with Aboriginal communities and representatives. Embedding cultural safety into all aspects of an organisation relies upon building effective partnerships between the service and Aboriginal clients and communities. Such partnerships ensure that program offerings can meet local community needs, and be informed by Aboriginal worldviews, as well as local expertise and knowledge. 6. Research, monitoring and evaluation Research, and ongoing monitoring and evaluation is identified in a number of policy frameworks as foundational to culturally safe service delivery.	- Provide all staff with ongoing cultural safety training and reflection opportunities to provide them with the skills and knowledge required to engage safely and competently with Aboriginal children, families and communities. 4. Whole of organisation approach Flexible activities: - Conduct a cultural safety audit of organisation (governance, mission, management, staff, partnerships, service offerings/programs, information management/data collection) to identify any workplace deficiencies and/or gaps in services. - Respond to audit findings by developing and implementing cultural safety action plans to address identified issues. - Develop services that are known to be culturally safe and implement new services according to cultural safety guidelines. 5. Leadership and Partnership Flexible activities: - Organisational leaders make a commitment to improving the long-term outcomes of Aboriginal and Torres Strait Islander children, young people, families and communities through prioritising their participation in accessible, high-quality early support that is trauma informed and culturally safe and targeted to the specific needs of the client. - Organisational leaders commit to enhancing the cultural safety of clients and actively model cultural safety expectations and behaviours for all staff. - Recognise sectoral and organisational leaders of cultural safety and highlight their activities and share best-practice initiatives across the sector and organisation. - Organisational leaders to adequately fund investment and resourcing for cultural safety initiatives and related service improvements including ongoing staff training and reflection and conduct of a cultural safety audit. - Seek, establish and maintain meaningful partnerships with local Aboriginal and Torres Strait Islander communities to support ongoing communication and the provision of services that address local needs. 6. Research, monitoring and evaluation Flexible activities: - In consultation with Aboriginal staff and community representatives, co-design indicators of cultural safety for Aboriginal children and families accessing services, as well as mechanisms to collect data to assess if cultural safety outcomes are being achieved. - Undertake assessment activities or evaluations of staff cultural safety training programs to determine their effectiveness in increasing staff knowledge, changing attitudes, and ability to deliver culturally safe programs and care. This should be done on an ongoing basis. Support knowledge transfer and the development of evidence-based sectoral practice by sharing examples of organisational and program success within your organisation.		4. Whole of organisation approach 5. Leadership and partnership 6. Research, monitoring and evaluation.

Community Strengthening Program Logic

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	CLIENT OUTCOMES
Target group is children, young people, families and communities in need, in particular: - Aboriginal children, young people, families and communities; 0–5 year olds; - Children and young people at risk of disengagement from school, family and community; - Young parents with known vulnerabilities or who are experiencing a number of hardships; - Children and young people affected by a mental health condition/s; - Children under 9 years of age with low level autism and/or developmental delay and low-to-moderate support needs. Children, young people, families and communities may experience a number of challenges, which can be compounded by lack of support services and community infrastructure. Further, over the past few years, communities have been impacted by floods, bushfires, COVID-19 and cost of living increases. In 2021, the national percentage of children developmentally vulnerable in one or more domains increased from 21.7% in 2018 to 22.0% in 2021. The percentage of children who were developmentally vulnerable in two or more domains also increased from 11.0% in 2018 to 11.4% in 2021.³² Social isolation and loneliness are among many factors that can be detrimental to a person’s wellbeing. An increasing number of people aged 15–24, especially females, have reported experiencing loneliness since 2012. Social isolation has been increasing across all age groups for decades.³³ Aboriginal and Torres Strait Islander people’s strong connection to family, land, language and culture forms the foundation for social, economic and individual wellbeing. This is integral to efforts to close the gap.³⁴ A 2023 report mapping disadvantage in NSW estimates in 2021–22 there were more than 995,000 people in NSW living with significant economic disadvantage – below the poverty line.³⁵ Other challenges include mental health, family violence, high unemployment rates and local government areas (LGAs) with low socio-economic ranking on the SEIFA index.³⁶ If these issues are not addressed, disadvantage in communities is expected to become further entrenched. Children in these	Strong community wellbeing is critically important for helping children, young people and families thrive, especially when they are experiencing, or at risk of experiencing, vulnerability. <u>Five critical elements</u> are common across the evidence that contribute to increased community wellbeing for vulnerable children, young people and families: Inclusive and genuine co-design and partnership: building authentic partnerships with community that work towards community ownership while also ensuring that the diverse voices of the community are represented. Leveraging strengths and building capacity: initiatives that are both strengths based and actively building community capacity. Creating safe and effective spaces: spaces that are safe and accessible to everyone to allow for the effective engagement of diverse community members. Intersectional and safe approaches: incorporating an understanding of how the different aspects of a person's identity (e.g. gender, ethnicity, disability) can expose them to overlapping and intersecting forms of discrimination and marginalisation to allow for the delivery of a more integrated, safe and holistic suite of services. A whole system approach: interventions that are part of a whole system approach that interconnects multiple community cohorts and agencies. (DCJ Evidence Portal: Community Strengthening Evidence Review).	The Community Strengthening program activity encompasses activities aimed at facilitating greater community cohesion, inclusion and wellbeing, and empowerment of Aboriginal communities. Community Strengthening activities seek to maximise social engagement, as well as provide social supports to ensure greater opportunities for both individuals and families within the community, as well as the community as a whole, through: - Advocacy and support - Community engagement - Community sector coordination - Education and skills training - Facilitating employment pathways - Information, advice and referral - Indigenous advocacy/support - Indigenous community engagement - Indigenous healing activities - Social participation	As per contracted deliverables	The evidence shows that the following critical elements have a positive impact on community wellbeing outcomes: - Inclusive and genuine codesign and partnership - Leveraging strengths and building capacity - Creating safe and effective spaces - Intersectional and safe approaches - A whole system approach. Community wellbeing is a collective sense of belonging, participation, trust, and access to resources and services that allow individuals and their communities to flourish and fulfil their potential. Community can be critically important for helping children, young people and families thrive, especially when they are experiencing, or at risk of experiencing, vulnerability. To thrive, children and young people need protective factors such as relationships with supportive adults, safe environments and places to play, and high-quality social, emotional and educational learning experiences. The presence of more than one protective factor can reduce risks to a child’s development and life outcomes. By focusing on community wellbeing, services can help achieve positive outcomes for children, young people and families by	Social and Community - Increased inclusion and participation in community - Increased sense of belonging to their community - Increase in formal and informal networks Empowerment - Increased client reported self-determination - Families and carers are empowered and confident to understand and meet their child’s development needs Education and Skills - Increased school attendance and achievement - Reduced number of children starting school developmentally vulnerable in one, or two or more Australian Early Development Census domains Economic - Sustained participation in employment Safety - Reduced risk of entry into the child protection system Health - Improved health and development of children and young people - Improved parental health Home - Sustained safe and stable housing

families are likely to be negatively impacted which may result in poor developmental, educational and social outcomes. Community development has positive outcomes for children, young people and families. This includes increasing: - parenting skills; - parental confidence; - self-awareness and confidence; - visits to health professionals and other services; - knowledge and understanding of money management; - employment; - re-engagement with education.³⁷ Community development has also been shown to decrease: - injury and suicide rates; - low literacy levels; - alcohol related hospitalisation; - crime rates.³⁸ Family violence In addition to providing support and resources to families impacted by family violence, Community Strengthening service providers have a role in the prevention of family violence by addressing the known root causes and drivers (e.g. patriarchal norms, sexist and violence-supportive peers, masculine attitudes, and violence-supportive settings and contexts). Community mobilisation and strengthening are a key technique in prevention of family violence. Community-led approaches: - enhance community knowledge and understandings of the prevalence, drivers and different forms of family violence; - foster a shared commitment to ending family violence including through increased connection between community members who already support gender equality.³⁹ The NSW Government primary prevention strategy (for the prevention of domestic, family and sexual violence) has three key priorities: - progressing prevention action in priority settings: local communities; schools, and early childhood education and care; workplaces; and sports clubs and organisations; - supporting Aboriginal-led primary prevention; - building centralised supports and the evidence base.⁴⁰	The <u>5th critical element</u> also provides evidence supporting the community sector coordination service type. A summary of elements of best practice in youth work include: - connectivity: development of programs and services that are long term, sustainable and relationship based, birthed and sourced from within the community. - strengths-based approach: embracing notions of independence and autonomy among services for young people. - capacity building: ability to build capacity in terms of staff professional development, effective research, evaluation and information gathering and sharing, and leadership in the area of governance and management. - contextual and systemic considerations: consideration of macro-contexts including economic, political and social and cultural factors. (DCJ Evidence Portal: <u>Agency and Empowerment Evidence Review</u>).			reducing risk factors and increasing protective factors within the community. Community engagement and development approaches occurring as a relational process at a local level are effective at improving outcomes for children, young people, families and communities. Community sector coordination System level initiatives that promote comprehensive, protective and preventative service delivery support are key to achieving enduring change.	Service System Outcomes⁴¹ - Strengths based - Flexible and responsive - Culturally safe and responsive - Capable - Collaborative - Person centred and community centred - Evidence informed

Family Connect and Support (FCS) Program Logic

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	CLIENT OUTCOMES
The number of Child Protection Helpline reports continues to rise and less than one-third of children reported at Risk of Significant Harm (ROSH) receive a face-to-face assessment.⁴² Reviews of the NSW child protection system between 2008 and 2019 consistently highlight that there is inadequate investment in early intervention services to support families to address their complex needs and vulnerabilities to prevent contact with statutory child protection and entries into OOHC.⁴³ Target group: children, young people, families and communities in need, in particular: • Aboriginal children, young people & their families; • Children aged 0–5 years; • Children and young people at risk of disengagement from school, family and community; • Young parents with known vulnerabilities or who are experiencing a number of hardships; • Children and young people affected by a mental health condition/s; • Children under 9 years of age with low level autism and/or developmental delay and low-to-moderate support needs. The NSW Government and Australian Government have committed to reduce overrepresentation and increase access to early intervention for Aboriginal families⁴⁴. In addition, families with vulnerable young children 0–5 and young people affected by a mental health condition have been identified as priority populations.⁴⁵ Families have needs that cross government silos (e.g. economic, health, housing, education, safety) and attempts to coordinate services across agencies have failed to improve their outcomes.⁴⁶ The current service system is complex and difficult to navigate, with inconsistencies in service provision and entry points across geographic locations. This makes it difficult for families to access the supports available to them.⁴⁷	Available evidence on effective and targeted early intervention can significantly impact the developmental outcomes, and in turn, life trajectories of children, families and communities. Research shows that enablers of success and specific service features of interventions include soft entry points; flexible approaches that respond to individual needs; strengths-based approaches; and community-driven and culturally appropriate design.⁴⁸ Consultations with the child and family sector, in the FCS redesign process, highlighted the effectiveness of identifying, engaging and referring families to services before their situation escalates. The FCS model builds upon the strengths of the longstanding NSW Family Referral Services, implemented as part of the Keep Them Safe Reforms. These strengths include: • Information and advice to help families navigate the service system • Warm referrals • Brokerage funds • Assertive outreach. The core component ‘Engagement’ is critical to preventing child abuse and neglect⁴⁹. Engagement activities include building trust and being flexible in delivery to meet the needs of clients. How services engage with families is crucial to ensuring parents/caregivers participate and remain in a program. In the case of FCS, families’ support needs are met and they are effectively engaged and connected with the appropriate services through warm referrals.	Proactive outreach • Outreach into universal settings, home visits and cold calling to better reach families. • Anyone who presents to FCS will be provided with support if they are not already engaged with the statutory child protection system. Holistic assessment • Timely needs and strengths-based assessment. • Whole-of-family lens, trauma informed and culturally safe. Timely and warm referrals • Intake and referral gateway into local services and supports, with support to navigate the system. • Culturally appropriate information and referrals. • Advocating for client access to services, arranging services and introducing clients to the referral agency. • Active outbound contact with families and/or outbound agencies to learn if family’s needs have been met/whether further support is required. Active holding and flexible brokerage • Check ins and support to families, including practical supports and use of brokerage, home visits, follow up with services – until a suitable service can be accessed. • Brokerage funding where presenting issues can be quickly	As per contracted service deliverables	Through early access to service and support, families can build their own capabilities to meet their goals and safely care for their children. This is achieved by increasing a family's knowledge of services and supports that may help their ability to engage in appropriate services, leading to increased empowerment and family functioning.	• Families engage with Family Connect and Support • Families identify their needs, through assessment considering the 7 NSW Human Services Outcomes Framework domains (social and community, economic, education and skills, safety, home, health, and empowerment) and the additional FCS outcome domain ‘family relationships’ • Families are provided with culturally appropriate service information and referrals Empowerment • Families have increased knowledge of the services and supports available to them • Families have improved resourcefulness to meet their needs • Families are empowered to engage with services which support their needs • Families feel heard, understood and respected when engaging with FCS • Families and carers are empowered and confident to understand and meet their child’s development needs Safety • Children are safe within their families • Reduced risk of entry into the child protection system

	Evidence shows ‘Engagement’ is most effective when practitioners also: • Build a positive relationship with families by fostering a trusting and caring partnership built on empathy respect and open communication, and • Actively work with families to overcome barriers to their participation⁵⁰. Engagement is important in ensuring families who require it receive case management; parental education, coaching and modelling; parental self-care and personal development; and building supportive relationships and social networks.⁵¹ In FCS, this may involve referring clients to services that provide these.	addressed through practical assistance. Family-led decision making • Meetings with families are strengths based and encourage family decision-making and responsibility about the services with which they engage. • Informal supports within the family as well as formal supports are identified and engaged in partnership with the family. • Referral to a formal family group conference. Whole-of-family case coordination and planning • Dedicated case coordination and a single point of contact for the family. • Individualised, single case plan that can move with the family. • Case conferencing meetings with the family’s service providers to facilitate coordination of service provision.			Health • Families, children and young people’s mental health and wellbeing are improved • Improved health and development of children and young people

Wellbeing and Safety (Children and Families) Program Logic

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	CLIENT OUTCOMES
Target group: children, young people, families and communities in need, in particular: • Aboriginal children, young people, families and communities; • 0–5 year olds; • children and young people at risk of disengagement from school, family and community; • young parents with known vulnerabilities or who are experiencing a number of hardships; • Children and young people affected by a mental health condition/s; • Children under 9 years of age with low level autism and/or developmental delay and low-to-moderate support needs. Child abuse and neglect is associated with a variety of adverse outcomes in both the short and long term. It can affect all domains of child development – physical, psychological, emotional, behavioural and social. It also has enduring impacts that can lead to poorer outcomes later in life (e.g. in educational attainment, health and employment). The 2024 Australian Early Development Census (AEDC) demonstrated that 1 in 5 children in NSW were not developmentally on track in at least one of five domains — physical health and wellbeing, social competence, emotional maturity, language and cognitive skills (school-based), and communication skills and general knowledge, and about 1 in 10 were vulnerable in two or more areas. These developmental disparities have profound consequences, with children experiencing poor early development, earning approximately 25% less than their peers throughout their lifetime.⁵² AEDC data also reveals a widening gap in developmental outcomes for Aboriginal children. This higher prevalence of developmental concerns coupled with disproportionate access to services creates a ‘life-long negative cycle’ that contributes to socio-economic disadvantage.⁵³	Children need safe and supportive families to thrive and do their best when their parents are supported early to give them the best start in life and promote optimal child development.⁶⁵ Five core components are common across evidence-based programs that prevent child abuse and neglect, and improve parenting knowledge, skills and behaviours: 1. Engagement How services engage with families is crucial to contributing positive outcomes to ensure parents/caregivers participate and remain in a program until they have achieved their goals. 2. Case management This includes providing wraparound and coordinated support and conducting referrals and case conferencing when necessary to meet the needs of families. It also includes facilitating family-driven goal setting and planning to ensure families have a say about the support they receive. 3. Parental education, coaching and modelling This ensures parents have the skills and knowledge to meet their children’s needs and is crucial to behaviour change that can prevent child abuse and neglect. The focus of this education should be tailored to the family. It may include practical advice about routines or typical infant and child behaviour. It may also include resolving family conflict or practicing positive parenting behaviour. In the context of family violence, this may also include activities that support victim-survivors to restore their confidence in parenting, within safe, respectful spaces. 4. Parental self-care and personal development Ensuring that parents/caregivers have their mental health, physical and personal needs met is very important. Parents may be unable to meet the needs of their children if they are struggling with their own issues. Identifying issues parents may face and working with them to address those issues can improve their	The following five core components focus on reducing risk factors and enhancing protective factors for children, young people and families at risk of child abuse and neglect (including family violence). The core components can also be applied when working with parents and carers to meet their child/ren’s early learning and development needs. These components can be tailored to the local needs of communities; the individual preferences of clients; and availability of service system resources (including referral pathways and service partnerships/collaborative practice). Each core component has flexible activities that describe different ways it can be implemented. In delivering the core components, services should also reflect how they could address the unique needs of children, young people, families and communities experiencing or at risk of family violence by: • undertaking comprehensive assessment of strengths and needs, and safety planning; • identifying and working with children and young people as victims of family violence in their own right; • identifying and working in a family-led way towards holistic goals related to safety, health, economic, education, community, and cultural needs of all family members; • delivering a wraparound approach to case management that is therapeutic, trauma informed, and culturally safe and responsive; and • providing specialised family violence referrals to address the needs of all family members.	As per contracted service deliverables	• Reducing risk factors and enhancing protective factors associated with child abuse and neglect (including family violence), ensures children and young people are safe and families thrive. • Wraparound and coordinated supports assist parents to develop positive parenting skills and address underlying causes of negative parenting practices. • If parents and carers are supported to identify and understand their child’s needs early, they can more confidently and effectively respond to, and support their child’s learning and development. • If parents and carers are supported to build their capacity, they are more likely to develop sustainable caregiving strategies that can be adapted as children grow and their needs evolve. • Timely early intervention supports during a child’s early years can break cycles of disadvantage, unlock developmental potential, and improve long term outcomes. • If more children and young people at risk of family violence are identified and supported early, this will reduce the risk of significant harm and the long-term negative outcomes of family violence and exposure to family violence. Further, fewer children and young people are likely to experience or perpetrate family violence in adulthood, helping to interrupt intergenerational cycles of family violence. Engagement How services engage with families is crucial to ensuring they participate, and remain in a program, until they have achieved their goals. Building safety and	Safety • Reduced risk of entry into the child protection system • Increased safety from family violence and (longer term) reduced rates of family violence Social and Community • Increased inclusion and participation in community • Increased sense of belonging to their community • Increased client connection to supportive relationships Empowerment • Increased client reported self-determination • Families and carers are empowered and confident to understand and meet their child’s needs Education and Skills • Increased school attendance and achievement • Reduced number of children starting school developmentally vulnerable in one, or two or more Australian Early Development Census domains Economic • Sustained participation in employment

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	CLIENT OUTCOMES
Family violence Family violence is one of the most common issues presenting in child protection notifications in Australia.⁵⁴ Children and young people who experience family violence, including by witnessing or exposure, are victim-survivors in their own right.⁵⁵ The presence of family violence makes a child more likely to experience physical and sexual abuse and all forms of neglect.⁵⁶ A study found that young people who had witnessed abuse between family members and had been subjected to targeted abuse were more than 9 times likely to use violence in the home than those who had not experienced any child abuse.⁵⁷ Children and adolescents who experience negative parenting practices, neglect or abuse are more likely to: - suffer externalising problems, including aggression and engaging in crime and delinquency⁵⁸ - exhibit low self-esteem, deficits in social competency and have difficulty forming relationships with peers⁵⁹ - suffer internalising problems such as anxiety, depression, withdrawal, and post-traumatic stress disorder⁶⁰ - engage in substance abuse, self-harm, and suicidal ideation⁶¹ - experience cognitive delays and learning difficulties and long-term deficits in educational achievement	capacity to build a loving and caring home environment and positive relationship with their children. 5. Building supportive relationships and social networks Parents need supportive and positive relationships with family and friends. This provides parents with someone they can go to for advice or respite when they need it. It also ensures that children have a number of adults with their best interests at heart. (DCJ Evidence Portal: Preventing Child Maltreatment Evidence Review) Additionally, these five core components also contribute to outcomes of improved: family functioning; use of support services by parents; parent relationships and social support; parental mental health and reductions in parent substance use; family violence; and child medical care and reduced hospitalisations. There is emerging evidence suggesting that therapeutic programs in response to family violence that work conjointly with the mother and children are promising. Therapeutic responses can include individual counselling, group work and mother-child interventions, with the aim of strengthening parent-child attachment relationships through play-based or counselling-based therapy.⁶⁶ Advocacy/case management interventions that have strong linkages with communities, and are community focused, have been found to have significant effects on mental health outcomes	The core components are: 1. Engagement Flexible activities: <u>Build a positive relationship</u> <u>Remove barriers to participation</u> (Service Types: All) 2. Case Management Flexible activities: <u>Wrap around and coordinated support</u> <u>Service utilisation and referrals</u> <u>Family driven goal setting and planning</u> <u>Case conferencing</u> (Service Types: Family Capacity Building) 3. Parenting education, coaching and modelling Flexible activities: <u>Family problem solving</u> <u>Newborn and infant care</u> <u>Prenatal care</u> <u>Positive parenting practices</u> <u>Child health and safety</u> (Service Types: Education and skills training; Family capacity building; Indigenous parenting programs; Indigenous supported playgroups;		trust and being flexible in delivery to meet client needs is critical. Working actively with families to overcome barriers to participation ensures families continue to receive the support they need. Case Management Understanding and addressing the needs of families is crucial to improving outcomes, including providing material, emotional and practical support to parents/caregivers, particularly those in crisis or chaotic environments. Flexibility (differing levels of intensity and for short or long periods of time) of support is critical. Family-led decision making and planning ensures their needs and goals are at the centre of service delivery and supports self-determination. Developing a holistic plan to support the family can ensure they are provided with multiple and integrated supports for all family members. Parenting education, coaching and modelling Parenting education, coaching and modelling ensures parents/caregivers have the skills and knowledge to meet their children's needs, including practical advice about routines or typical infant and child behaviour, and resolving family conflict or practicing positive parenting behaviours.	Health - Improved health and development of children and young people - Improved parental health - Improved client personal wellbeing Home - Sustained safe and stable housing

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	CLIENT OUTCOMES
There is great need for early intervention strategies that focus on reducing risk factors and enhancing protective factors associated with child abuse and neglect.⁶² Parents need wraparound and coordinated supports that not only support them to develop positive parenting skills but address the underlying causes of negative parenting practices.⁶³ This requires flexible and local responsive systems that can respond early and effectively to issues and challenges.⁶⁴	and access to resources for family violence survivors.⁶⁷ A qualitative study commissioned by ANROWS into Aboriginal and Torres Strait Islander healing programs for family violence found what works in healing programs that respond to family violence is ‘understanding trauma in the context of the family and the community, understanding the impacts of colonisation and intergenerational trauma, understanding people as more than just people who either use or experience violence, delivering programs in safe and familiar places, working in strengths-based and healing-informed ways, engaging thoughtfully with all parties, focusing on prevention, and keeping families together.’ The study also found that programs should be conceived and led by Aboriginal and Torres Strait Islander people and that trauma-aware practice was described as ‘taking the whole family and wider community into consideration, and accounting for current, recent, past and intergenerational trauma.’⁶⁸	Parenting programs; Supported playgroups) 4. <u>Parental self-care and personal development</u> Flexible activities: • <u>Building confidence and self-sufficiency</u> • <u>Life skills development and education</u> • <u>Address parental risk factors</u> • <u>Counselling</u> • <u>Support to cope with stress</u> • <u>Anger management</u> (Service Types: Counselling; Family capacity building; Indigenous supported playgroups; Supported playgroups; Specialist support) 5. <u>Building supportive relationships and social networks</u> Flexible activities: • <u>Multifamily recreation activities</u> • <u>Involve family and friends</u> • <u>Strengthen parent relationships</u> • <u>Improve parents’ informal support</u> (Service Types: Family capacity building; Indigenous parenting programs; Indigenous supported playgroups; Mentoring/peer support; Parenting programs; Supported playgroups)		Supporting parents to positively interact and engage with their children fosters the social, emotional and cognitive development of the child. It can also ensure parents understand how to appropriately discipline their children, mitigating the risk of child abuse. Parental self-care and personal development Ensuring that parents/caregivers have their mental health, physical and personal needs met is critical to ensuring they can meet the needs of their children. Addressing parental risk factors can ensure parents are in the best place possible to care for their children and keep them safe. It can also ensure parents have the capacity to develop their parenting skills and meaningful engage with supports that are provided. In the context of family violence this may also include ensuring the victim’s safety needs are met and activities that support victim-survivors to restore their confidence in parenting, within safe and respectful spaces. Building supportive relationships and social networks Supportive relationships between parents/caregivers and their families ensure that children have a number of adults with their best interest at heart. Supportive relationships also enable parents/caregivers to seek advice and respite from others when needed. Holistic case management that recognises the impact of family violence on the whole family unit, including the extended family and kinship network, and supports this network on the pathway to healing, helps facilitate long-term positive outcomes including safety from family violence.

Wellbeing and Safety (Young People) Program Logic

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	CLIENT OUTCOMES
Target group: young people aged 10 – 24 transitioning from childhood to adulthood, particularly those facing disadvantage, including: - Aboriginal children, young people, families and communities; - Children and young people at risk of disengagement from school, family and community; - Young parents with known vulnerabilities or who are experiencing a number of hardships; - Children and young people affected by a mental health condition/s. Particularly vulnerable groups include people living regionally, Aboriginal children, families or communities, LGBTIQA+ people, people living with disability and/or people from culturally and linguistically diverse communities, including migrants and refugees. Young people are at the life stage where they experience significant physical, emotional, psychological, cognitive and social changes. They may also face a range of challenges including increased poverty and housing insecurity, homelessness, disengagement from education and an increase in mental health issues, and cost of living increases. Family Violence Family violence is one of the most common issues presenting in child protection notifications in Australia.⁶⁹ Children and young people who experience family violence, including by witnessing or exposure, are victim-survivors in their own right.⁷⁰ The presence of family violence makes a child or young person more likely to experience physical and sexual abuse and all forms of neglect.⁷¹ A study found that young people who had witnessed abuse between family members	Socioemotional wellbeing is essential for our overall health and wellbeing. Socioemotional wellbeing is a state of wellbeing that encompasses personality traits and skills that characterise a person's relationships in a social environment. Programs that seek to improve socioemotional wellbeing build behavioural and emotional strengths and the ability to adapt and deal with daily challenges and respond positively to adversity while leading a fulfilling life.⁸⁰ Young people who are socioemotionally well and competent have been found to: - communicate well, - have healthy relationships, - be confident, - perform better at school, - take on and persist with challenging tasks, and - be resilient against life stressors.⁸¹ Five core components are common across evidence-based programs that foster socioemotional wellbeing in young people aged 10–24: - self-concept, self-efficacy and confidence - mindfulness and self-regulation - prosocial skills and relationship building - building motivation and monitoring behavioural change - building knowledge and awareness for socioemotional wellbeing. (DCJ Evidence Portal: Youth Socioemotional Wellbeing Evidence Review) Authentic relationships built on trust and mutual respect form the foundation of good youth work practice, together with having an ecological focus, encouraging personal agency, and fostering alternative possibilities. Many youth work interventions directly or indirectly foster empowerment and agency in	The following <u>five core components</u> are essential to fostering socioemotional wellbeing outcomes for young people aged 10–24. These components can be tailored to the local needs of communities, the individual preferences of clients, and availability of service system resources (including referral pathways). Each core component has <u>flexible activities</u> that describe different ways it can be implemented. Core components should reflect how service providers can address the unique needs of children, young people, families and communities experiencing or at risk of family violence by: - undertaking comprehensive assessment of strengths and needs, and safety planning; - identifying and working with children and young people as victims of family violence in their own right; - identifying and working in a family-led way towards holistic goals related to safety, health, economic, education, community, and cultural needs of all family members; - delivering a wraparound approach to case management that is therapeutic, trauma informed, and culturally safe and responsive; and - providing specialised family violence referrals to address the needs of all family members.	As per contracted service deliverables	Young people who are socioemotionally well and competent have been found to: - communicate well - have healthy relationships - be confident - perform better at school - take on and persist with challenging tasks; and - be resilient against life stressors.⁸⁶ Early identification and support of young people at risk of family violence, are at a reduced risk of significant harm and long-term negative outcomes of family violence and exposure to family violence, and less likely to experience or perpetrate family violence in adulthood, helping to interrupt intergenerational cycles of family violence. A wraparound approach that is therapeutic, trauma informed and culturally safe is important in delivering these objectives. Self-concept, self-efficacy and confidence Building self-awareness and skills critical to dealing with difficult situations, embracing connection to self and culture, and fostering autonomy and independence is critical for young peoples' self-concept, self-efficacy and confidence. Mindfulness and self-regulation Honing body awareness and strategies for calming the body, managing emotions and relieving stress is critical for young peoples' mindfulness and self-regulation. Prosocial skills and relationship-building Building the social skills required to positively interact with peers and community members through fostering communication and engaged learning with others. Peer learning and support activities where young people learn with their peers. Engagement with community and skill-building critical to	Empowerment - Increased client reported self-determination Social and Community - Increased inclusion and participation in community - Increased sense of belonging to their community Education and Skills - Increased school attendance and achievement Economic - Sustained participation in employment Safety - Reduced risk of entry into the child protection and justice systems - Increased safety from family violence and (longer term) reduced rates of family violence Health - Improved health and development of children and young people - Improved parental health - Improved client personal wellbeing

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	CLIENT OUTCOMES
and had been subjected to targeted abuse were more than 9 times likely to use violence in the home than those who had not experienced any child abuse.⁷² Exposure to family violence as well as a form of harm in itself, significantly limits the ability of young people to navigate and manage the life stage changes they are experiencing.⁷³ Mental health In the period 2020–22, 38.8% of young people aged 16–24 experienced a mental disorder that lasted for 12 months or more.⁷⁴ Young people aged 16–24 are more likely to have a substance use disorder than other age groups.⁷⁵ Young people have the highest rates of hospitalisation for intentional self-harm. In 2021–22, the rate for young people aged 15–19 was 389 hospitalisations per 100,000 population, the highest of all age groups.⁷⁶ Suicide is the leading cause of death for Australians aged 15–24. In 2022, deaths by suicide represented 30.9% of all deaths in young people aged 15–17 years and 32.4% of all deaths in those aged 18–24 years.⁷⁷ School engagement and attendance Disengagement from school can negatively impact young people’s educational and employment outcomes in the future. In 2021, approximately one in twelve secondary school students were suspended, with 32,547 short suspensions and 12,505 long suspensions issued.⁷⁸ Interactions with the justice system Young people are more likely to have interactions with the criminal justice system than adults.⁷⁹ The social, educational, emotional, health and safety risks affecting young people make	young people. Rights-based approaches, and recognition of the need to give primacy to youth voice and participation in decision making are critical to empowering young people and safeguarding their rights. A summary of elements of best practice in youth work include: - connectivity: development of programs and services that are long term, sustainable and relationship based, birthed and sourced from within the community - strengths-based approach: embracing notions of independence and autonomy among services for young people - capacity building: ability to build capacity in terms of staff professional development, effective research, evaluation and information gathering and sharing, and leadership in the area of governance and management - contextual and systemic considerations: consideration of macro-contexts including economic, political and social and cultural factors. (DCJ Evidence Portal: Youth Work – Agency & Empowerment Evidence Review) Culture is key when working with people whose culture is different from one’s own. In practice, this requires the development of self-awareness and the ability to reflect upon one’s own culture, beliefs and values. Youth work practitioners are strongly encouraged to learn about the cultures of the people they work with and about the communities where they live and practice. Every young person has different needs, goals, and desires and those may or may not relate to their cultural identity. However, there are some cultural differences that youth workers and youth work organisations should be mindful of when working with Aboriginal young people. In Western cultures, individual rights are held in high regard, however in	The core components are: Self-concept, self-efficacy and confidence Self-concept, self-efficacy⁸⁵ and confidence is achieved through positive self-identity, body image, cultural connectedness and identity. Mindfulness and self-regulation This provides strategies to enable self-regulation, stress management and emotional regulation. Prosocial skills and relationship building Build social skills required to positively interact with peers and community members through fostering communication and engaged learning with others. Building motivation and monitoring behavioural change Motivate behavioural change or attitude and monitor and document behavioural changes over time. Building knowledge and awareness for socioemotional wellbeing Structured or unstructured learning and development activities that underpin the other core components. And are delivered through the following service types: - Counselling - Education and skills training - Information, advice and referral - Mentoring and peer support		establishing and maintaining healthy relationships. Building motivation and monitoring behavioural change Motivate a behavioural change or attitude and/or monitor and document behavioural changes over time. Encourage young people to consider and change otherwise risky behavioural choices, or to plan to make healthy choices that promote their socioemotional wellbeing. Building knowledge and awareness for socioemotional wellbeing Structured or unstructured learning and development activities that underpin the other core components (includes activities to enable critical thinking, metacognition and self-regulation, addressing risks, promote healthy relationships, consider social norms). Youth work interventions directly or indirectly foster empowerment and agency in young people, through a broad range of supportive practices and activities conducted with young people, across a range of different settings. Critical to youth work practice is: - a practice that places young people and their interests first - a relational practice, where the youth worker operates alongside the young person in their context - an empowering practice that advocates for, and facilitates a young person's independence, participation in society, connectedness and realisation of their rights - voluntary, participatory, responsive, and contextual.	Home Sustained safe and stable housing

⁸⁵ Self-efficacy refers to subjective judgements of one’s capabilities to organise and execute courses of action to attain designated goals (Bandura, 1977, 1997). In other words, self-efficacy relates to a person’s perception of ‘How well can I do something?’ rather than ‘What am I like?’.

CURRENT SITUATION	EVIDENCE	ACTIVITIES AND SERVICES	OUTPUTS	THEORY OF CHANGE	CLIENT OUTCOMES
these years critical for increasing engagement and providing early supports. Strengthening protective factors and responding to known risks and vulnerabilities will enable young people to thrive and reach their full potential.	Aboriginal and Torres Strait Islander cultures, there is a stronger emphasis on collective rights and the sharing of resources.⁸² Family and culture are central to the identity and wellbeing of Aboriginal people. Youth workers can honour these values by involving community members, family and elders in their work with youth as often as possible (with the consent of the young person). Young people from CALD backgrounds may face unique challenges associated with feelings of displacement, recovery from trauma, discrimination, migration stress and lack of social supports.⁸³ Conversely, young people from CALD backgrounds may benefit from protective factors that build resilience such as kinship, hopefulness and cultural identity.⁸⁴ These risk and protective factors are not homogenous across all CALD youth. Consequently, youth work interventions and services targeting these cohorts must consider the individual circumstances of each young person. (DCJ Evidence Portal: Youth Work – Agency & Empowerment Evidence Review)	- Specialist support - Youth individualised support.		Authentic relationships built on trust and mutual respect form the foundation of good youth work practice, together with having an ecological focus, encouraging personal agency, and fostering alternative possibilities. Connectivity Develop programs and services that are long-term, sustainable, relationship based, birthed and sourced from within the community. Strengths based Embrace notions of independence and autonomy among services for young people. Capacity building Build capacity in terms of staff professional development, effective research, evaluation and information gathering and sharing, and leadership in the area of governance and management. Contextual and systemic considerations Consider macro-contexts including economic, political and social and cultural factors. (The four key elements of best practice in youth work (DCJ Evidence Portal: <u>Agency & Empowerment Evidence Review</u>))

Outcomes for Aboriginal People in the Community and Family Support Program

⁸⁷ ©Yirra Miya. For more information on the meaning of Yirra Miya's cultural panel, visit our CAFS webpages on the [DCJ website](#).

Outcomes for Aboriginal People in the Community and Family Support Program

 Culture

Outcomes:
Aboriginal people are connected to culture and community. Aboriginal people know and are connected to extended family and kin.

Outcome descriptions:
Connection to culture fosters identity, pride and resilience in Aboriginal people and supports individual wellbeing, especially for Aboriginal children and young people.

Aboriginal people are supported and respected on their individual journey to connect to culture.

 Safety

Outcomes:
Aboriginal people experience a holistic sense of safety. This includes: physical safety, mental wellbeing, parental wellbeing, cultural connection and belonging.

Aboriginal families stay safely together.

Outcome descriptions:
Aboriginal people are connected to, and protected by, community and culture.

Aboriginal people access culturally safe and responsive supports that address any issues and reduce risk from escalating.

Aboriginal children and young people grow up safe, strong and connected to culture.

 Social and Community

Outcomes:
Aboriginal people have an increased sense of cultural pride and community belonging through connection to Elders, culture and Country.

Increased attendance and participation in events and services that celebrate the history, diversity, culture and achievements of Aboriginal people.

Outcome descriptions:
Aboriginal people are connected to Elders and community; and the wisdom and traditions of culture, language and intergenerational relationships.

Aboriginal communities have access to culturally safe, responsive and locally-informed services that create community cohesion and support. Aboriginal communities are built through culture. Aboriginal culture is practiced and celebrated.

Aboriginal people are connected to broader community.

 Empowerment

Outcomes:
Aboriginal people experience belonging and connection to culture which builds self-esteem, supports self-determination, and fosters wellbeing.

Outcome descriptions:
Aboriginal people have access and choice to services that are Aboriginal designed and culturally safe and responsive.

Aboriginal people can access services that prioritise both community and family-led decision making; and support wellbeing and community-controlled solutions.

Outcomes for Aboriginal People in the Community and Family Support Program

Appendix D: CAFS Service Types

Community Strengthening program activity

SERVICE TYPE	DESCRIPTION	REPORTING GUIDANCE
Advocacy and support	Activities include advocacy, problem-solving and being an intermediary for children, young people, families and communities to help and encourage people to find the support that's right for them. This is typically multiple interactions with a client and other stakeholders.	Where possible, service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Community engagement	Organising community events or festivals or planning activities with community members that align with, or would achieve, CAFS outcomes. This may also include consultation activities with community. Community engagement activities may take place in a neighbourhood or community centre. Examples of planning activities include a community-level child protection, housing, education, health or employment plan, or a plan that addresses a number of these. Note: the service must facilitate the sessions and write the plan to count this as an activity, not just participate in consultations run by other services. Plans should include the change that the community is trying to achieve and how this will be measured, including both short and medium or long-term measurement.	- Organising community events or festivals can only be counted if the service is responsible for organising and running the event (e.g. contributing resources, time and staff to organise it, not just participating or attending). - If an event runs for three days, record one session for each day the event occurs, therefore three sessions would be recorded for this event. - Each meeting held to discuss a plan should be counted as a session. - Service providers delivering this service type will primarily collect and report unidentified group client details.
Community sector coordination	Activities undertaken by non-governmental organisations to support service delivery coordination, planning and collaboration within the sector, strengthen organisational capacity of local CAFS organisations, and help organisations and community networks to plan and support their communities to achieve CAFS outcomes. Examples include: - organisational governance activities/support - strategic planning activities - coaching/mentoring and other 1:1 support to CAFS providers - workforce development and skills/capability building, including through education and training, practice tools, resources and frameworks, and information/communication to the sector. This service type will not be delivered under contracts with local councils. This service type does not include coordinating local interagency activities or communities of practice. All community sector coordination activities will support service delivery and align with the CAFS Service System Outcomes.	- The community sector coordination service type does not need to be reported in DEX. - See the CAFS Data Collection and Reporting Guide for more information about reporting on the community sector coordination service type and the Community Sector Coordination reporting tool.
Education and skills training	Activities that: - build community member knowledge, skills, experience, confidence, wellbeing, social inclusion, participation or individual capability. Examples include literacy, numeracy, life skills, financial management and budgeting, whether delivered to individuals or in a group. - build the knowledge and skills of community members to better meet, interact and/or volunteer. These may include individual, group or other client-centred approaches. Online activities can be recorded where specific workshops or modules are delivered to a group of individual clients.	Where possible, service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Facilitate employment pathways	Activities that build the skills of community members, including young people, to facilitate pathways to employment. Examples include résumé writing workshops, employment skills development and volunteering, whether delivered to individuals or in a group.	Where possible, service providers delivering this service type will collect and report individual client details and outcomes in DEX.

SERVICE TYPE	DESCRIPTION	REPORTING GUIDANCE
Indigenous advocacy / support	Activities include advocacy, problem-solving and being an intermediary for Aboriginal children, young people, families and communities to help and encourage people to find the support that's right for them.	Where possible, service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Indigenous community engagement	Organise Aboriginal community activities, events or festivals that support Aboriginal communities, or community events promoting Aboriginal issues. This could include social, cultural, recreational, youth, art or language activities, workshops, or linking up members of a community around a shared issue, memorial days, reconciliation activities and erecting plaques or monuments.	- This can only be counted if the service is responsible for organising and running the event (e.g. contributing resources, time and staff to organise it, not just participating or attending). - If an event runs for three days, record one session for each day the event occurs. - Service providers delivering this service type will primarily collect and report unidentified group client details.
Indigenous healing activities	Activities that facilitate healing for Aboriginal communities, families or individuals through a spiritual process that includes therapeutic change and cultural renewal. Healing is a holistic process that can include mental, physical and spiritual needs, thus the activities under this service type are varied. Examples include: - reclaiming history: oral history projects that document the experience and history of the Stolen Generations and commemoration and memorial activities that mark their losses. - cultural interventions: activities that engage people in a process of recovering and reconnecting to culture, language, history, spirituality, traditions and ceremonies to reinforce self-esteem and a positive cultural identity. - therapeutic healing: includes a combination of traditional and Western therapies to help individuals and communities recover from trauma.	Where possible, service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Information /advice / referral	Provision of standard advice, guidance or information for individuals or families in relation to a specific topic. This may be delivered by phone calls, drop-ins, online, emails and so on. This is typically a single interaction with a client. Referrals include to another service provider or within the organisation. The referral must be effective and timely, facilitate client engagement, build and maintain referral pathways and partnerships, and help individuals and families to easily access services and determine the way their support is provided. Material aid/brokerage may be offered to clients in this service type to support a soft entry into the service system.	Where possible, service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Social participation	Initiate or facilitate community workshops and activities that are in line with CAFS outcomes. This includes: - social, cultural, recreational, youth activities, art or language activities; workshops; or linking up members of a community around a shared issue, - activities that encourage connectedness for community members, which would increase social inclusion, connection and participation. For example, community playgroups, mentoring, leadership programs, peer support, relationship, social skills, whether delivered one on one or in a group. - providing spaces for clients to have an opportunity to connect with others, such as a neighbourhood or community centre, informal locations, or online to achieve the CAFS outcomes. Examples include regular groups, such as parenting groups, community playgroups, youth groups, early childhood education, care or support, maternal and child health services, Aboriginal Elders, men's and women's groups, Aboriginal enterprises; providing access to internet and Wi-Fi; or access to equipment such as toys, books and car seats. Community playgroups are informal gatherings where babies, toddlers and pre-school aged children and their parents and carers can come to learn through play and connect with one another. Community playgroups can be run by a worker or volunteer and are generally self-managed and aimed at all families.	- Count each occasion of service as a session. - Where possible, service providers delivering this service type will collect and report individual client details and outcomes in DEX.

Family Connect and Support (FCS) program activity

SERVICE TYPE	DESCRIPTION	REPORTING GUIDANCE
Active holding	Where an outbound referral service is at capacity or not yet accessible, FCS service providers will actively maintain contact and provide support to the client family while they are waiting for services to become available. Active holding involves the FCS service provider monitoring the family circumstances and providing <u>short-term</u> case support to address immediate needs, including practical support and home visits, and follow-up with service providers while suitable services are being arranged. The <u>CAF</u> includes further guidance on active holding practice.	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Family capacity building	Family support activities provided to build family capacity and address comprehensive needs – for example, implementing case plans and case coordination activities such as: - intake and assessment (initial and comprehensive) - advocacy - material aid/brokerage - support (legal, language, etc.) - skills development (life skills, budgeting, etc.) - safety planning in the context of family violence (where relevant). In FCS, it may also include bringing together family members (including extended family and kin) and/or other members of a family’s informal support network to discuss issues, needs and strengths, and jointly developing a family-centred and led plan that supports the family to achieve their goals. This could be undertaken in different settings, including home visits, a community venue, online or at the service provider. It may include case conferencing meetings with the family’s service providers to facilitate coordination of service provision. When working with Aboriginal families, case coordination and case management practices should align to the <u>Aboriginal Case Management Policy</u>, in particular the principles of Aboriginal family-led assessment, and Aboriginal family-led decision making. Assessment in a case coordination setting involves assessing the strengths and needs of the child, young person and family, including any risks. The <u>CAF</u> and <u>CAT</u> provide guidance on completing initial and comprehensive assessments. Capture any information, advice or referrals conducted as part of case coordination under the family capacity building service type.	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Information / advice / referral	Accessible, timely and culturally appropriate service information, advice and referrals. Frontline staff provide immediate and comprehensive help to clients and address their needs before any significant assessment. This may be delivered by phone calls, drop-ins, emails and so on. This is typically a single interaction with a client. Referrals (including warm referrals) should support families by connecting them with the service system or arranging services and conducting follow-up with the family or service provider. Referrals can be internal (within the organisation) or external (outside the organisation).	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.

Wellbeing and Safety program activity

SERVICE TYPE	DESCRIPTION	REPORTING GUIDANCE
Counselling	Counselling provided by a qualified practitioner such as a psychologist or psychotherapist to one or more clients or family members. Techniques, orientations and practices used should be broadly accepted, validated and based on client need.	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Education and skills training	Targeted, specialist or intensive support that builds the knowledge, skills and wellbeing of people with high and complex needs or known vulnerabilities (e.g. disengagement from school, family violence, mental health conditions, drug and/or alcohol needs, social/economic disadvantage, families and carers of children with developmental concerns). These may include individual, group or other client-centred approaches. For young people, this may involve a wide range of programs delivered in school covering topics such as healthy relationships and consent. Online activities can be recorded where specific workshops or modules are delivered to a group of individual clients.	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Family capacity building	Family support activities provided to build family capacity to address comprehensive needs. For example, implementing case plans and case management activities, such as: - advocacy - intake and assessment (initial and comprehensive) - case coordination - counselling (undertaken as part of holistic case management)⁸⁸ - material aid/brokerage - support (legal, language, etc.) - mediation - referrals and service navigation (e.g. including to community support-based networks, child developmental services, therapeutic supports, allied health, food banks, employment services) - skills development (life skills, budgeting, skills to support children’s development, etc.) - services that may include a therapeutic component, or a specialist framework intended to meet a specific intensive need - safety planning in the context of family violence (where relevant). This could be undertaken in different settings, including home visits, a community venue, online or at the service provider. When working with Aboriginal families, case coordination and case management practices should align to the Aboriginal Case Management Policy, in particular the principles of Aboriginal family-led assessment, and Aboriginal family-led decision making. Assessment in a case management setting involves assessing the strengths and needs of the child, young person and family, including any risks. Refer to the CAF and CAT for further guidance on completing initial and comprehensive assessments. Capture any information, advice or referrals conducted as part of case coordination or case management under the family capacity building service type.	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Indigenous parenting programs	Indigenous parenting programs are delivered by Aboriginal staff to Aboriginal parents or carers, or parents or carers of Aboriginal children. They provide support specifically targeted at understanding and strengthening parent–child	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.

⁸⁸ Counselling must align with the definition provided against the Counselling service type under the Wellbeing and Safety program activity.

SERVICE TYPE	DESCRIPTION	REPORTING GUIDANCE
	relationships through education, knowledge or practical skill building for parents. Parenting programs are usually delivered in a structured format and could be undertaken in different settings, including home visits, a community venue, online or at the service provider. Service providers delivering Indigenous parenting programs are not required to select an evidence-informed parenting program from the evidence-informed parenting program list. Indigenous parenting programs should be designed with community and practitioner expertise, with reference to the Aboriginal-led Early Support Programs Evidence Review.	
Indigenous supported playgroups	Indigenous supported playgroups are delivered by Aboriginal staff to Aboriginal parents or carers, or parents or carers of Aboriginal children. They provide an opportunity to share experiences of parenting and learn new parenting skills while being supported by workers who coordinate the activities. Supported playgroups help to improve children’s social, emotional, communication and cognitive skills and behaviours, increase school readiness, build parental capacity and satisfaction with parenting, and strengthen belonging and connection of families in their communities. They also provide children with an opportunity to socialise, play and learn in a structured and positive environment as well as participating in age-appropriate learning experiences and activities to help them become school ready. Indigenous supported playgroups are facilitated by a professional worker with: • qualifications in early childhood, or • experience in early childhood or in working with families with children. Indigenous supported playgroups are delivered using the <u>best practice principles</u> and <u>the key elements of supported playgroups delivered to Aboriginal families</u> identified in the evidence scan and align to the <u>Early Years Learning Framework</u>.	• Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Information / advice / referral	Provision of standard advice, guidance or information for individuals or families in relation to a specific topic. This may be delivered by phone calls, drop-ins, emails and so on. Referrals include to another service provider or within the organisation. The referral must be effective and timely, facilitate client engagement, build and maintain referral pathways and partnerships, and help individuals and families to easily access services and determine the way their support is provided. Capture any information, advice or referrals conducted as part of case coordination or case management under the family capacity building service type.	• Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Mentoring / peer support	This includes facilitating self-help or peer support groups for parents, carers or young people experiencing particular issues (e.g. a post-natal depression group, parenting and caring for children with development delay or low level autism).	• Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Parenting programs	Programs that provide support specifically targeted at understanding and strengthening parent–child relationships through education, knowledge or practical skill building for parents. This may include specific parenting programs for parents and carers of children with developmental delay or low level autism with a focus on parenting information and strategies, and skills for supporting child development including self-regulation and self-management. Parenting programs are usually delivered in a structured format. Program selection should be driven by local need, client compatibility and cultural safety. This could be undertaken in different settings, including home visits, a community venue, online or at the service provider. Service providers will select an evidence-informed program where possible. To help service providers find a suitable option, the CAFS program has a list of evidence-informed parenting programs (available on the DCJ website). Providers should review the evidence-informed list and select a program where it is suitable and relevant to their local context and client and community need. Where this is not appropriate, a ‘locally applied’ model can be delivered following negotiation with the DCJ contract manager. Parenting programs are generally delivered to a group of parents, as opposed to an individual parent one-on-one with a caseworker. However, some specific parenting programs may have a home visiting component and be delivered one-on-one.	• Service providers delivering this service type will collect and report individual client details and outcomes in DEX.

SERVICE TYPE	DESCRIPTION	REPORTING GUIDANCE
Specialist support	Specialist support is services that are intended to meet specific intensive need, which could have a therapeutic component. They can be delivered by a qualified worker. In some cases, this will involve engaging or employing specialist services for a fee to work with the family more intensively, where these services can't be engaged any other way, or in a timely manner. Service providers may include therapeutic supports, allied health services, drug and/or alcohol services, intellectual or physical disability services, family mediation, family violence and sexual assault support services and problem gambling services.	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Supported playgroups	Supported playgroups are an opportunity for parents or caregivers to share experiences of parenting and learn new parenting skills while being supported by workers who coordinate the activities. They also provide children with an opportunity to socialise, play and learn in a structured and positive environment as well as participating in age-appropriate learning experiences and activities to help them become school ready. Supported playgroups can be tailored to meet the unique needs of children with developmental concern or delay and/or low level autism and their parents and carers. Supported playgroups are facilitated by a professional worker with: - qualifications in early childhood, or - experience in early childhood or in working with families with children. Additional qualifications or expertise may be required when delivering a supported playgroup for parents/carers of children with developmental delay or low-level autism or in providing support to parents/carers and their children with developmental delay, to participate in a supported playgroup. This may involve engaging specialist workers in the delivery of a supported playgroup such as occupational therapist, speech pathologist, behaviour supports, etc. Service providers delivering supported playgroups should select one of the models in the Supported Playgroup Rapid Evidence Scan to deliver a supported playgroup in the CAFS program. Where this is not appropriate, a 'locally applied' model can be delivered following negotiation with the DCJ contract manager. 'Locally applied' supported playgroup models will be based on best practice principles (identified in the Supported Playgroup Rapid Evidence Scan) and aligned with the Early Years Learning framework. When selecting a supported playgroup model, consider the available evidence, local context and client and community need.	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.
Youth individualised support	Youth individualised support seeks to capture the unique work that youth services do to support the wellbeing and safety of young people. Activities include case management or individualised support for a young person that enables independence and autonomy and prioritises the young person's voice in decision-making. This can include: - intake and assessment (initial and comprehensive) - organising activities to promote greater interconnectedness for young people - support – navigating government systems, completing forms for access to services (e.g. Centrelink or housing), legal, language, etc. - advocacy - assistance with employment pathways – such as help with résumés - counselling - mediation - referrals - material aid/brokerage (may be offered to clients to support their overall case management) - mentoring. This could be delivered in different settings, including home visits, a community venue, online or at the service provider. * NSW Government typically considers young people as aged 12 to 24 years.	Service providers delivering this service type will collect and report individual client details and outcomes in DEX.

Appendix E: Preventing Child Maltreatment core components and service types

CORE COMPONENT	WELLBEING AND SAFETY PROGRAM ACTIVITY SERVICE TYPES
Engagement	• All service types
Case management	• Family capacity building
Parental education coaching & modelling	• Education and skills training • Family capacity building • Indigenous parenting programs • Indigenous supported playgroups • Parenting programs • Supported playgroups
Parenting self-care & personal development	• Counselling • Family capacity building • Supported playgroups • Indigenous supported playgroups • Specialist support
Building supportive relationships & social networks	• Family capacity building • Indigenous parenting programs • Indigenous supported playgroups • Mentoring/peer support • Parenting programs • Supported playgroups

Appendix F: CAFS Service System Outcomes

CAFS Service System Outcome Domains ⁸⁹	 Strengths based	 Flexible and responsive	 Culturally safe and responsive	 Capable	 Collaborative	 Person and community centred	 Evidence informed
CAFS Service System Outcomes	CAFS services adopt a strengths-based approach to service delivery.	CAFS services are flexible, accessible and responsive.	CAFS services are culturally safe, responsive and inclusive.	CAFS services provide meaningful client and community engagement by skilled staff.	CAFS services provide coordinated support and clear referral pathways through enduring partnerships across the service system.	CAFS services are child, young person, family and community centred. They support clients and communities to build their capacity for change.	CAFS services learn from data, program implementation, client voices and feedback, innovative pilots, research evidence and evaluations to improve service design and delivery, and client outcomes.
Description	- Strengths-based practice focuses on abilities, knowledge and capacities rather than deficits. It recognises clients and communities are experts in their own lives, and supports children, families and communities to be resilient and capable of growth, learning and change. - Interactions with clients and communities build on protective factors and help grow capability and confidence. - Services draw on the unique strengths of the family and engage in family-led decision-making, goal setting and case planning.	- Clients and communities access free services most appropriate to their needs through accessible, timely, responsive and integrated services and referrals to ensure their needs are addressed early. - Active efforts are made to engage clients and support them to overcome barriers to accessing supports and services. CAFS services are proactive in improving service visibility and accessibility. - Services actively connect with clients and communities who need support in	- Cultural safety means an environment which is spiritually, socially and emotionally safe, as well as physically safe, where there is no assault, challenge or denial of a person's identity and what they need.⁹⁰ - The following are critical elements of cultural safety for Aboriginal people: 1. Recognising the importance of culture 2. Self-determination 3. Workforce 4. Whole of organisation approach 5. Leadership and partnership 6. Research, monitoring and evaluation.	- Clients and communities access services from providers and workers who are respectful and have the appropriate skills to work with those who are marginalised and/or experiencing vulnerabilities. - Service providers are committed to the capability building and professional development of their staff. - Services promote a culture of learning and reflective practice and identify opportunities for training of their staff in key elements relevant to their day-to-day work with clients.	- Clients and communities receive integrated and coordinated support from services. - Clients and communities are supported to navigate a complex service system. - Services contribute to capacity building in the local community and are actively involved in shaping the sector in partnership with others. - Clients and communities are supported to build informal and formal networks. - CAFS practitioners are confident in their ability and the	- Clients and communities are placed at the centre of the service and the service meets their unique needs. - Clients and communities actively participate in the design and delivery of services to achieve their determined goals. - Clients exercise choice and control in service delivery and life decisions. - Client rights to confidentiality and privacy are upheld. - Practitioners take an intersectional approach, recognising there are multiple factors influencing and	Clients and communities have access to programs that are evidence informed.

⁸⁹ It should be noted that domains overlap, and indicators may measure more than service system domain.

		settings that meet their needs (e.g. outreach and services in everyday settings). Services consider and are responsive to the needs and preferences of diverse clients, particularly those with additional vulnerabilities.	Promoting respect and positive attitudes for diversity and supporting children, young people, families and communities from all backgrounds and cultures by fostering belonging and inclusion.		legislative basis to share information to support families experiencing risk and to increase wellbeing and safety.	contributing to a person's identity (e.g. gender, sexuality, disability, ethnicity).	
Example service provider activities	- The CAFS sector is trained and supported to identify the strengths of the children, young people, families and communities they work with to improve their circumstances and achieve their goals. - For Aboriginal communities, this includes programs and services that incorporate Aboriginal social structures such as wider kinship networks, Elder mentors and role models, and ways of sharing knowledge and wisdom such as connecting to Country, circular learning, yarning, relationship-strengthening activities, dadirri discussion methods, lore, traditional art, food, dance, songlines, music and storytelling, and the use of language.	- Strategies include ensuring engagement with families (particularly when first making contact) by facilitating access, through home visits/outreach (including in universal and everyday settings), provision of transport, using bilingual staff, being flexible in-service delivery, ensuring accessible locations and removing any barriers to access (e.g. expanding the window for clinic scheduling, flexible opening hours, using diverse communication strategies, mobile services). - For Aboriginal communities, the existence of Aboriginal governance and staff, and/or the involvement of respected community leaders or Elders can lead to increased program participation.	- Services should be trauma informed and healing focused, acknowledging the impacts of intergenerational trauma as well as ongoing experiences of racism and stigma. - Co-designed and community-led services are the most effective for engaging and supporting Aboriginal children, families and communities. - For culturally and linguistically diverse (CALD) communities, developing an understanding of and being respectful of children, young people and family's culture, race, nationality, beliefs and strengths. Seeking the expertise of local cultural community and multicultural services. Practitioners learning about the cultures of the persons with whom they work and about the communities where they live and practice. - In Western culture, individual rights are held in high regard whereas in other	CAFS sector has good governance, leadership and core competencies professional development opportunities.	- CAFS sector works together and maintains partnerships to meet the complex and changing needs of clients. - Integrate multiple, wraparound components to provide more holistic services for Aboriginal participants. - Bi-directional warm referrals between services or having partner services co-located for easier access and integration of case management. - CAFS sector actively participates in local governance committees etc. - CAFS services are supported by peak bodies to maintain partnerships with DCJ.	- CAFS sector is trained and supported in person-centred practice. - Services and supports are designed to focus on achieving the client's goals and are tailored to their needs and unique circumstances rather than requiring them to fit into a standardised service model. - Client and community participation in all aspects of service design, planning, implementation and evaluation.	CAFS sector uses available evidence and data to design, implement and improve their services and client and community outcomes.

			cultures there may be an increased focus on collective rights and shared resources. Practitioners should consider involving family, community and elders where appropriate. • When language is a barrier, using interpreters or translated material to communicate with children, young people and their families. • For CALD communities, supporting community-led strategies that provide culturally appropriate and accessible information about safety and wellbeing.				
Example community sector coordination activities	• Tailored skill and professional development sessions focused on strengths-based practice.	• Facilitate strategic planning activities or provide coaching/mentoring support to ensure CAFS service providers are well placed to offer flexible service delivery to meet the needs of their community. • Activities to build and sustain the Aboriginal workforce.	• Increasing cultural safety and wellbeing knowledge through training and reflection opportunities. • Form and facilitate partnerships with Aboriginal leaders to embed cultural safety within organisational governance and strategic planning and to ensure service offerings are informed by Aboriginal worldviews, local knowledge and expertise. • Building the capacity of service providers to incorporate the Aboriginal Case Management Policy. • Facilitation of cultural capacity building to inform service delivery to CALD children, young people, families and communities.	• Activities undertaken by non-government organisations to support service delivery coordination, which includes development of workforce capability and skills including training, practice tools, resources and frameworks that support the aims and objectives of the CAFS program. • Building the skills and capabilities of practitioners in relation to evidence-informed practice.	• Form and coordinate partnership projects and working groups, including strategic planning activities that support integrated services, identify gaps and strengthen collaborative opportunities and referral pathways.	• Identify training needs and gaps and facilitate activities that foster and strengthen the knowledge and skills of practitioners in relation to person-centred practice. • Build the skills, capacity and capability of service providers to be informed by local community needs.	• Create and maintain resources, training opportunities and general information to support evidence-informed approach. • Build the skills and capabilities of practitioners to engage with the DCJ Evidence Portal and use evidence in decision-making, planning, practice and service delivery. • Use evidence and data to identify service gaps.

Example short term & medium-term indicators for service providers	Program wide – Client satisfaction SCORES which measure whether clients felt heard and whether services were effective in helping them meet their goal may indicate a program delivers strengths-based services.	- Number of services which are aligned to need. - Number of referrals accepted. - Number of clients coming into contact with the child protection system.	- Number of staff who have attended cultural safety training. - Number of staff who have attended trauma-informed practice training. - Number of service providers with a plan for implementing changes that support a culturally safe and responsive workplace. - Number of services designed by Aboriginal or CALD communities. - Number of services delivered by Aboriginal Community Controlled Organisations or Aboriginal staff. - Feedback from Aboriginal clients on their experience of receiving support and feelings of empowerment.	- Number of adequately qualified staff (as per contractual agreements). - Number of staff who have successfully completed cultural safety, trauma-informed practice and/or family violence (including coercive control) training. - Number of staff participating in ongoing professional development, including reflective practice and supervision.	- Number of partnership projects. - Length of time a partnership has existed or a partnership project has been running. - Number of peaks meetings organised and attended.	- Number of co-designed projects with clients. - Number of services designed by Aboriginal communities or CALD communities. - Number of services delivered by Aboriginal and CALD managed or majority managed and staffed organisations. - Number of staff who attended person-centred practice training.	- Number of services with program logics assessed as high quality. - Number of evidence-informed programs delivered, or programs designed using the evidence or core components outlined in the DCJ Evidence Portal. - Number of CAFS services staff who implemented new evidence that was discussed within peer group discussions.

CAFS Service System Outcome Domains	 Strengths based	 Flexible and responsive	 Culturally safe and responsive	 Capable	 Collaborative	 Person and community centred	 Evidence informed
Overall Service System indicators which measure service system and the capacity of the sector	Strengths based - Number of services which use person/family-led tools and decision-making processes when they engage with individuals/families. Flexible and responsive - Number of organisations delivering services in rural communities. - Number of clients living in LGAs with no service providers (DEX data – client LGA and outlet LGA). - Number of organisations conducting outreach. Culturally safe and responsive - Number of co-designed projects by service providers. - Number of Early Support services designed by Aboriginal communities or CALD communities. - Proportion of CAFS services delivered by Aboriginal Community Controlled Organisations or Aboriginal staff. - Proportion of Aboriginal staff within sector. - Proportion of CALD staff within sector. - Proportion of CAFS services and staff who have attended cultural safety training. - Proportion of service providers with a plan for implementing changes that support a culturally safe and responsive workplace. Capable - Proportion of service providers which actively monitor the implementation of plans to implement workplace safety. - Proportion of service providers with adequately qualified staff (as per contractual agreements). - Proportion of service providers with staff who have attended trauma-informed practice training. Collaborative - Number of partnership projects delivered by service providers. Person and community centred - Proportion of CAFS service providers who have staff trained in person-centred practice. - Proportion of CAFS sector staff who have trained in person-centred practice. - Proportion of providers who have a plan for implementing trauma-informed practices within their organisation. - Proportion of providers who actively monitor their plan for implementing trauma-informed practices within their organisation. - Proportion of service providers who use client and community participation in service design, planning, implementation and evaluation. Evidence informed - Proportion of service providers delivering evidence-informed programs or programs designed using the core components. - Proportion of service programs that are evidence-informed (which have program logics rated as high quality). - Proportion of Family Support Services that have used the Preventing Child Maltreatment core components in their design and delivery. - Number of service providers using the DCJ Evidence Portal including relevant key elements, critical elements, key themes, etc. to design and implement services. - Number of emerging programs identified from the CAFS sector. - Number of services with individual program logics that reflect/align to the program-wide program logics. - Number of Wellbeing and Safety services delivering parenting programs and supported playgroups from the list of evidence-informed programs/models.
